

Whitepaper of the Tiiendemanns Group

“The quest for the materialization of the 1001 Year Plan”

Whitepaper written by Alvin Leito & Chris van Maarseveen

(Graphic and UX designed by Ipek Demircioglu, working now on version 1)

Pre-Private Sale
Version 0.9.9d2 (plain text edition)

Abstract

The Tiiendemanns Group is a legal group of entities, helping to get the world in a much better state than it is today and ensuring it to stay that way for future generations. We will do this by building a multicultural global transgenerational minded organization with a corporate for-profit earnings model that is designed to help tackle directly or indirectly some of the collective problems we are currently experiencing, like wealth inequality, loneliness because of digitalization, wage stagnation and indignant working environments and more. By serving humanity and earning our income by introducing new services to the world like Viisiit.® (a new door-to-door & livingroom-to-livingroom service provider that rewards its members called Welcomers for their time, attention and eventual contribution to surveys during product presentations, all paid by Viisiit.® and advertisers that uses the offline product presentation platform of Viisiit.®) and products like PreciousChips® (a new metal playing chip that can be sold directly or through subscriptions that brings precious metals investing to the general public) we can start investing in sustainable initiatives to help our planet become healthy and prosperous again.

The Tiiendemanns Group will use existing blockchain platforms (Bitcoin & Komodo) to run its own payment and utility cryptocurrency and future security token systems. We consider potential further blockchain developments in case there is a considerable need to include additional features to the project with respect to our users' needs. You can contact or chat with a team member online through their personal accounts (found in chapter 5) or through these Tiiendemanns Groups' social media team accounts:

0. General introduction to this whitepaper

This whitepaper is written to introduce the trade secret of the Tiiendemanns Group, called the 1001 Year Plan. What the Tiiendemanns Group holds as a secret are the future projects contained in the 1001 Year Plan that either still needs market validation or R&D before we can announce them publicly. Every other parts of the 1001 Year Plan or the business handlings of the Tiiendemanns Group will be transparently and honestly communicated in this whitepaper and in all our public communications.

This whitepaper is the founding document of the Tiiendemanns Group of which everyone can use to hold the company later accountable to. Another purpose of this whitepaper is to explain the relation between all (legal) entities within the Tiiendemanns Group and to give readers of this whitepaper the first broad picture of what we want to concretely achieve with the 1001 Year Plan, that starts with the door-to-door & livingroom-to-livingroom service provider called Viisiit.®, that has its own payment currency called ViisiitCoin. To help Viisiit.® become financially self sustainable faster the Tiiendemanns Group will also together with Viisiit.® start with the production and sale of a new metal playing chips called PreciousChips®. PreciousChips® will be one of the first products in the product presentation portfolio of Viisiit.® that will be presented by Viisiiters to Welcomers. Both Viisiit.® and PreciousChips® are registered trademarks belonging to the Tiiendemanns Group.

This whitepaper is also written to explain how the starting fixed price per ViisiitCoin (or VC for short) is set when used on the Viisiit.® (e-commerce & “offline”) platform. Also to explain the relationship between a ViisiitCoin and the shares in the Tiiendemanns Group. The ViisiitCoin blockchain will be build as a sidechain on the Komodo-platform that is centrally governed by the Tiiendemanns Group and its shareholders. More information about the ViisiitCoin blockchain can be found in chapters 1.1.4 & 7.3. More information about the blockchain-platform that the ViisiitCoin-blockchain will be built on top can be found in chapter 6.

The terms and stipulations for your eventual participation in the pre-private sale can be found in chapter 7. All the projects listed in the 1001 Year Plan, are the Intellectual Property of the Tiiendemanns Group. Most projects described in the 1001 Year Plan are not disclosed in this whitepaper because the trademarks and/or patents are not filed yet. Awaiting trademark registration approval for Dutch Joker Poker© and the ViisiitCoin®-logo. The ViisiitCoin® name is already protected under the Viisiit.® name registration.

This will be the first of 4 official whitepapers, each for each step in the (pre-)private and (pre-)public dICO/STO sale. Most of what is written in this version will stay and still be valid in the last officially published whitepaper, only the corresponding sections for the sale of the ViisiitCoins will be revised and updated. Fundamental changes to terms or public planning will be separately addressed in subsequent whitepapers too.

0.1 Introduction to the Tiiendemanns Group

The Tiiendemanns Group is a legal group of entities, working for the common good and global collective, its stakeholders and shareholders, all represented by one company headquartered in The Hague, the Netherlands, called Tiiendemanns Holding B.V. (f.t.). Tiiendemanns Holding B.V. is the in perpetuity licensee and re-licensor of all IP's described in the 1001 Year Plan.

The Tiiendemans Group is a company with strong beliefs that is voiced in the beginning by the founder, Alvin Leito, who also starts with the role of chairperson, president and ceo of the Tiiendemans Group. These beliefs are formed by the foundation that the company is founded on, which is the 5P-Formula©. The 5P-Formula© is a tool that Alvin designed, before having come up with the idea of the Tiiendemans Group, that helps people and organizations make decisions not based on monetary profit but natural profit for all its team members and the global collective. In short the 5P-Formula© works as a “morality compass” for organizations and individuals.

Alvin itself will start as a minority shareholder of the Tiiendemans Group, but will hold the vast majority of the voting power in the Tiiendemans Group through his chairperson-ship of the Tiiendemans Group Trust. The Tiiendemans Group Trust is the entity within the Tiiendemans Group that holds the vast majority of the restricted shares that are statutory locked starting from 2 years to 1001 years. The heirs and descendants of the founder of the Tiiendemans Group will be the last persons and/or entities that will receive the statutory set 0.25% of the common shares of the Tiiendemans Group 1001 years after start of Tiiendemans Holding B.V..

The Tiiendemans Group is a company designed to be given to the world, where its team members and shareholders receive financial rewards for their work and time and financial investments and every one else can benefit through the services, products and experiences that the Tiiendemans Group will bring to the global market. A part of the Tiiendemans Group will also be indirectly given to people through the issuance of a security token called ViisiitToken, in which ViisiitToken holders can exchange their tokens for actual common share certificates in Tiiendemans Holding B.V..

In essence, the Tiiendemans Group is a for-profit for the common good company, as we care for both present as future generations that need a safe, healthy and fun world to live in. By helping to tackle collective social problems directly like wealth inequality, (physical feeling of) loneliness because of the digitalization of societies and distrust in advertising, with the products and services of Viisiit.® that we will introduce to the market, we as a company strives to make our world a better and in a more harmony connected place. To work on the collective social problems that we can only indirectly help to tackle, it's statutory set that 10% of the common shares in Tiiendemans Holding B.V. will be divided between 2 different non-profit charities described in the founding statutes of the holding.

This type of company in which by design a large portion of the global community can become shareholders of the company in the future just by holding an utility token, without needing to buy shares on public equity exchanges is revolutionizing. What is also revolutionizing is the idea for a company to work towards global philanthropic goals on a capitalistic sustainable basis. Corporate greed is damaging both global markets and our natural world. The Tiiendemans Group is designed to serve as proof that capitalism can function without being greedy.

More information about the Tiiendemans Group can be found at www.tiiendemans.com.

0.2 Introduction to the 1001 Year Plan

The whole 1001 Year Plan was thought and initially designed by Alvin. This was done by first doing market research and contemplating on the question, what is all needed in the world that yet don't exist or that exists but is in dire need of modernization? This question became most prudent to be answered because Alvin wanted to start a company where he could have full control of the implementation of the 5P-Formula© in it.

The results of Alvin's' search for these answers is what became the 1001 Year Plan. In choosing which ideas to select to become potential projects housed in the 1001 Year Plan, Alvin selected them by deciding if they all have at least these 3 characteristics;

- Being ecologically & economically sustainable
- They need to bring value in people's lives
- They need to contribute to a better world

The 1001 Year Plan is a phased plan, that will gradually be put in motion by the Tiiendemanns Group, depending funding amount received and revenue generation of already started projects/companies. Only the projects not yet validated, awaiting trade mark registration or awaiting R&D to bring to market fall under the trade secret of the Tiiendemanns Group. These together with all the other intellectual properties, including already obtained trademarks, future patents, URL's and copyrights is the collective idea of what we call the 1001 Year Plan.

What the 1001 Year Plan is essentially saying is, let's see what's going to happen in year x, when we start doing 1a and 2a, (etc..) because then we will expect y to happen. The 1001 Year Plan is in essence a holistic group of philanthropic and humanitarian based ideas looking to find their footing in the real world. The fundament of these ideas are that they are driven by sustainable capitalistic motives as a means to help make the world a better place. So our "y" is to have a significantly better world for all in comparison from when we started. The 1001 Year plan is a phased plan, divided in 4 main time periods, starting with the first phase, the 15 Year Plan. Making it that all who are alive now do not need to go wait 1001 years to see the first results of this plan.

The name of the plan is also a bet that the founder does with the citizens of Earth. The name reflects a bet the founder of the Tiiendemanns Group makes with all citizens of the world, that in 1001 years after start of Tiiendemanns Holding B.V., the descendants and/or heirs of Alvin will receive the 0.25% (non-dilutable common shares) of Tiiendemanns Holding B.V. that is awarded to Alvin as non-performance based Common Shares from the 5% (non-dilutable common shares) that goes to the founder. Vesting periods starting with 0,5% of Tiiendemanns Holding B.V. in 12.5 years after start and ending with 0,25% at the 1001 year mark.

The reason for this bet is that the founder believes that our planet will achieve collective Peace and Prosperity, to which all people will experience much lower levels, to no levels of (negative) stress and will have much more free time to do the things that they love, anywhere on the planet they want. This new united global community will become fruitful beds for transgenerational capitalistic/private/decentralized organizations working besides transgenerational public organizations. It is the founders believe that the first transgenerational capitalistic global organization, a multinational that will celebrate its 1000 year anniversary is already currently active on the (public) global market.

So it is not that the Tiiendemans Group team believes that the Tiiendemans Group will become the first transgenerational global capitalistic organization that will pass the 1000 years, but that the Tiiendemans Group will become one of the transgenerational global organizations in the world.

0.3 The Peace and Prosperity-Equation© and the 5P-Management-Formula©

The Tiiendemans Group believes that to better safeguard against the risk of (total) bankruptcy, an organization would make the right choice in choosing to be managed with the culture based on the 5P-Management Principles and Philosophy-Formula© or 5P(-Management)-Formula© for short. The 5P-Formula© is a formula that was born based on the Peace and Prosperity-Equation©. The 5P-Formula© is in essence a decision optimization tool that puts organizations (or private people) on track to sustainable long term healthy growth by acting as their “morality compass” in their business handlings.

The 5P-Formula© hasn't been widespread tested in all different organizations yet, seeing that it was only in 2013 that the founder of the Tiiendemans Group designed the 5P-Formula©. This was about 2 years after finishing a MSc in Social and Organizational Psychology and a MSc in Public Administration, with the specialization in management of the public sector. After graduating from Leiden University and having pivoted from wanting to become a politician, Alvin became an independent management and social consultant and started on a journey to help organizations and people in a different way than through politics.

The foundation for the principles in the 5P-Formula© is the Peace and Prosperity-Equation©, but the molecule contained in the 5P-Formula© is formed out of, then a more contrarian belief than nowadays, that organizations need to put its core (= its team members) before processes and profits. The reasoning for this was that only then you get team members that will go care for the products they make or the services they need to give to the customers/clients of your organization. Only then team members will feel comfortable in becoming loyal ambassadors of an organization.

Realizing that the only way to have total control of the implementation of the 5P-Formula© in an organization was to either buy a company or start a company, when in 2015 the idea of what now became the Tiiendemans Group emerged, the choice was made to pursuit this project full time. It may take decades before we can make the argument backed by data that organizations that use the 5P-Formula© go significantly less time bankrupt than organizations that don't use the 5P-Formula© as their business foundation. In the meantime the Tiiendemans Group will serve as the example of all that can be achieved when an organization adheres to its principles.

The Peace and Prosperity-Equation© is a philosophical viewpoint that broadly describes how we as a collective must live our lives to achieve global Peace and Prosperity for all. The 5P-Formula© was designed based on that equation to give practical guidance to incorporate in ones' live to being able to adhere on the pathway towards Peace and Prosperity for all.

More information about the Peace and Prosperity-Equation© can be found at www.tcpaguidancecenter.com and more information about the 5P-Formula© can be found at www.tcpa5pmanagementconsultancy.com. These are both registered (passthrough) companies of the Founder of the Tiiendemans Group

0.4 Vision of the Tiiendemanns Group

#HugeAmbitions #AimingForTheStars #NoBullshit

The essence of the vision for the Tiiendemanns Group is to see all projects in the 1001 Year Plan get started and to see them conquer a significant market share in the global economy and becoming self-reliant. All the while doing business with a #NoBullshit attitude. You can be a “no-bullshitter” together with being a “jokester”. No bullshit, doesn’t mean, don’t have fun. It means, you are someone that treats others and yourself with respect.

Our vision for the Viisiit.® brand itself is to see that one day Viisiit.®, through a Viisiiter, will be able to visit and meet every single person behind every single front door in the world.

That is not just a hope we have, it’s a reality we’ll work to see happen. The beauty of this vision is that before Viisiit.® succeeds in this goal, it will have needed to create a new global door-to-door marketing, promotion, sales and distribution channel.

Our vision for the PreciousChips® brand is to bring sustainable investing in (precious) metals to the general public. With each PreciousChips® sold money goes to helping to give back closed (metal) mines back to our natural world or neighboring communities.

PreciousChips®

ViisiitCoin

Viisiit.

CONNECTING
WITH THE REAL YOU

0.5

Mission of the Tiiendemanns Group

Both Viisiit.® and PreciousChips® have clear vision and goals for it selves, but they both share their mission with the rest of the Tiiendemanns Group, just like every other entity in the Tiiendemanns Group. The mission that every entity upholds to is;

*Our eternal two main missions are;
To connect with the real you & Peace and Prosperity for all.*

*Being a team member of the Tiiendemanns Group means:
We don't work for ourselves. We work for our collective children around our world. So, we'll work hard and we'll complain only to improve ourselves and others. We'll need to work hard, because all children anywhere in the world needs a safe and (biodiverse rich) world, and the collective grownups are taking the world in the other direction of an unjust and empty world full of only man made things.*

((Respect > Freedom) >= (Peace > Prosperity))

*That is the Peace and Prosperity Equation©
That is a philosophical doctrine on how to achieve and keep global Peace and Prosperity, an equation designed by the founder of the Tiiendemanns Group to which all companies in the Tiiendemanns Group needs to uphold.*

Each team member has the freedom to do whatever they like in their own lives, but working for and representing one of the companies in the Tiiendemanns Group means not letting the company break this doctrine.

As a company, we can only directly contribute on seeing that the things being made, only in turn, contribute to the first two points mentioned in the second paragraph here above, that being, for a safe and ecologically sound world. Indirectly, we can contribute by making sure our actions help reverse the trend of unjust-fullness and social- & biodiversity degeneration.

Safe is for us not a code word for Peace, but without Peace there can't be safety. Just like it's our company's believe that without global Prosperity there cannot be (lasting) Peace. Achieving global Peace should not only be a collective goal, but also needs to be a perpetual human endeavor, because when we get it, we could also lose it.

Our internal mission "connecting with the real you" can be simply explained. We don't dislike technology, it is definitely handy and makes life easier, but we do like you better and most importantly, we do not want to get to know you through the devices you use.

We want to get to know the real you, without a digital lens between us and we want to connect with the real you. Our services and products are there to serve your needs, either for your business(es), the places you call home, for your private life or your pleasure.

Tiiendemanns

Holding B.V.

HiiNDERLOOPN

Ventures B.V.

0.6 Problems that the Tiendemanns Group will go tackle

Overall problems that the Tiendemanns Group will work to resolve:

- Unsustainable global supply chains
- Wage stagnation and indignant working environments
- Destruction of our natural resources for profit motives
- Public distrust in corporations

Overall problems that Viisiit.® will work to resolve:

- Distrust of the public for door-to-door sales people
- Distrust of the public for marketing in general
- Growing feeling of isolation and loneliness in societies because digitalization
- Small and medium-sized enterprises/organizations not having much choice other than advertising on the internet to connect with new customers/clients
- The general public not being rewarded for their time and attention when watching ads

Overall problems that PreciousChips® will work to resolve:

- The general public not being able to easily directly invest in precious metals
- (Precious) metal mines not being returned to nature and/or not being re-developed to help the surrounding communities after the mining activities are finished

0.7 Solutions to the problems that we will go tackle

Solutions to the problems that the Tiendemanns Group as a whole will go tackle:

- The unsustainable supply chains that we identified in urgent need of modernization and where no other company is trying to solve its problem by creating a sustainable supply chain that enhances humanity instead of leaching from it, are the supply chains in the marketing industry and the supply chains in the (precious) metal industry. These are also the supply chains that both Viisiit.® and PreciousChips® will go tackle.

- The Tiendemanns Group will be the first company in the world that will start with the 5P-Formula© as its foundation. The basis of the 5P-Formula© is grounded on the fact that an organization needs to have taking care of its core (= team members/employees) as its main priority. Having the 5P-Formula© with the Peace and Prosperity Equation© at the basis, means that as an organization we will be striving to help bring Peace and Prosperity to the world. And in a prosperous world there won't be room for destruction of our natural world and there won't be room for playing old school crony capitalist games to earn profits on the back of hard working people and innocent consumers. Once we succeed in this, the Tiendemanns Group will become the example that other corporations will strive to emulate.

Solutions to the problems that Viisiit.® specifically will go tackle:

- Viisiit.® will fail in its mission and will fail the 5P-Formula©, if it uses the same dishonest and manipulative marketing strategies currently widespread used in the marketing industry, so adhering to the 5P-Formula© is a way for Viisiit.® to go disrupt the whole marketing industry and regain the trust of the general public in the marketing campaigns of businesses. The revenue model of Viisiit.® is not "selling products" door-to-door, but selling product presentation slots to advertisers/publishers. Viisiiters don't sell products, but Viisiiters give Welcomers the chance to being able to order or buy products directly from them. These visits also create opportunities where different types of Viisiiters come in contact with different types of Welcomers, creating different serendipitous

moments of fresh new personal contact. Welcomers that only work in a certain area become for resident in that area the friendly face for Viisiit.® and its partners.

- By not serving only one advertisers at a time when visiting our Welcomers, we reduce the costs for doing door-to-door sales for organizations, making door-to-door sales accessible and affordable for even SME's.

- Using machine learning to learn about the wants and needs of our Welcomers we can further decrease the costs for advertisers to use our service in the future.

- By using blockchain technology we could reward our Welcomers for their time and attention, more cheaply and using a more secure (unhackable) system. While this technology also grants us the possibility to link actual shares of the company to the "reward points" we'll be handing out to our Welcomers, creating then the opportunity for Welcomers to earn both money and later share certificates just by participating in product presentations. With so much poverty in an age of plenty something is wrong*.

Tiendemanns Group with Viisiit.® will work to help eliminate poverty and close the wealth inequality gap.

Solutions to the problems that PreciousChips® specifically will go tackle:

- By partnering with a certified metal chip manufacturer in the Netherlands, we can produce new playing chips made entirely out of precious metals, or plated with precious metals, with high standards and with high re-sellable properties.

- By introducing a new subscription model for the general public to buy PreciousChips® over time, while freezing the price of the precious metals at the start of the subscription, we give the general public a new way of investing in precious metals without them having to invest a large sum in one time.

- When Casino's start becoming our clients, the general public will also have the chance to win for example pure gold PreciousChips® through slot machines, all the while PreciousChips® gives Casino's a new way to earn extra revenue through the difference in exchange rates.

- 5% of the common shares of Tiendemanns Holding B.V. will go to a charity that has as goal to help with nature conservation, smart city development and sanitation and sustainable re-development or renaturalization of closed (metal) mines. This is beside a percentage of all sales of PreciousChips® that will also go into the sanitation and/or re-development of closed mines. Strong sales of PreciousChips® will directly have influence on the value of the shares of Tiendemanns Holding, which will give the non-profit organization called the More Wild Animals Foundation (f.t.) better chances of succeeding in being able to fulfill its statutory duties for the world.

*This quote is not original but from an unknown author.

0.8 The organizational structure of the Tiendemanns Group

##HERE NEEDS TO COME AN ORGANOGRAM OF THE TIIENDEMANNS GROUP

The Tiendemanns Group is by design in essence a scaleup, comprised of different startups all working as one organization with a common mission and main organizational goals. All these startups start from the same egg called Hiinderloopn Ventures B.V..

Hiinderloopn Ventures B.V. is a 100% subsidiary of Tiendemanns Holding B.V.. This company can be described as the working horse of the Tiendemanns Group. Both starting brands Viisiit.® and PreciousChips® will first start operating directly under

Hiinderloopn Ventures. When they can hold on their own they will become independent operating companies, 100% subsidiaries of Hiinderloopn Ventures.

The Tiiendemans Groep will work from the beginning with a flexible organizational structure that is designed to grow and/or expand depending obtained investment sums and/or achieved revenue growth. That will mean that in the beginning multiple team members will work for more than one project and as the projects grow they will eventually need to take charge of lesser and/or single projects.

For example, Alvin will be the one end responsible for all projects, but the CTO of Hiinderloopn Ventures will be responsible for all day-to-day operation and security of the websites and digital platforms that fall under the Tiiendemans Group. When Viisiit.® and/or PreciousChips® grows too big to stay directly under Hiinderloopn Ventures and they will need to be incorporated as subsidiaries of Hiinderloopn Ventures, the CTO of the new ventures will get the responsibility of the technical operations of their companies and the CTO of Hiinderloopn Ventures gets free time to start with the next project(s) described in the 1001 Year Plan.

The Tiiendemans Group Trust is a non-profit Foundation that will hold the vast majority of the common shares at the start, intended for future investors/investment rounds and/or team members. The Tiiendemans Group Trust will be chaired by the founder of the Tiiendemans Group and will be responsible for the sale of the share certificates of Tiiendemans Holding B.V.. The Tiiendemans Group Trust will have the voting rights of each underlying share it holds and the sharecertificates holders will have full economic rights of each underlying share the certificates represent.

The founder, president, chairperson, CEO of the Tiiendemans Group, as is the official title of Alvin, will not start with the majority economic rights in the Tiiendemans Group, and will never be able to appropriate the majority of the economic rights in the Tiiendemans Group. Alvin will start with the vast majority of the voting rights through the shares under custody of the Tiiendemans Group Trust, like the 1 billion common shares linked to 1 trillion ViisiitTokens (more about what a ViisiitToken is can be found in chapters 1.1.4 & 1.1.5). The vast majority of this voting rights is applicable only on subjects mandated by the statutes, giving Alvin therefor only veto rights on certain crucial parts of the decision making in the business affecting the long term planning.

0.9 The starting share structure of the Tiiendemans Group

The shareholders of the Tiiendemans Group will eventually consist of;

- its whole team that gets either welcome bonus shares or shares for achieving pre-set performances and (personal/collective) goals
- investors; consisting of angel-investors, venture capital, family, friends & fools (of team members of the Tiiendemans Group).
- 2 non-profit Foundations, which have different humanitarian statutory goals
- Tiiendemans Group Trust which holds at the beginning the vast majority of the statutory set (restricted) shares in the Tiiendemans Group.
- in the future holders of ViisiitTokens that exchange their tokens for share certificates also become shareholders in Tiiendemans Holding B.V..

We will start with the Alpha Seed phase shares, which will be 700 million common shares and 9 million Class A shares (1 Class A = 100x voting power of 1 common share). The

Tiendemanns Group is a growth company and its share value will also reflect that. We are targeting not wild unsustainable growth, but steady gradual sustainable and dependable growth in value. How the Alpha Seed phase shares are divided and how that compares with the restricted shares under management by Tiendemanns Group will be more concretely explained in chapter 7.3.1.

1. Start of the 1001 Year Plan

The first phase of the plan is called the 15 Year Plan; (of the Grander 1001 Year Plan). The first phase will officially start when the Tiendemanns Holding B.V., Tiendemanns Group Trust and Hiinderloopn Ventures B.V. are incorporated.

The Tiendemanns Group is designed with a fast growth architecture towards global market domination in the industries it goes into as its foundation. All the projects described in the 1001 Year Plan are intertwined by design, because doing so creates efficiency, cost cutting, user base growth and revenue growth in their daily business handlings. This inter-project cooperation brings the overall operability of the Tiendemanns Group faster to profitability, which in the end creates faster opportunities to invest in the R&D of existing and new projects within the 1001 Year Plan waiting to start.

Inofficially the 1001 Year Plan already started with the creation of Tiendemanns Intellectualis Proprietas B.V., which already started the process to acquire the first trademarks in the 1001 Year Plan. This latter company is fully owned by the Founder and is the legal owner and licensor of all IP's belonging to the 1001 Year Plan. Tiendemanns Holding B.V. is the legal in perpetuity licensee of all IP's belonging to the 1001 Year Plan, and is the first in line with the right to buy all shares in Tiendemanns Intellectualis Proprietas B.V..

The 15 Year Plan will thus start when the rest of the initial 3 other entities get finalized, which is something that participants in the pre-private sale or the first accredited/institutional (equity) investors will make happen. Of the maximum of 3 accredited/institutional (equity) investors with Board of Directors seats, only 2 can come from the Eurasian continent, with investors forming a consortium for the buy-in of one of the investors seats not included.

After incorporation, we will start executing the plan by launching Viisiit.®, the ViisiitCoin blockchain and PreciousChips®. This will make PreciousChips® one of the first products being promoted and sold through this new door-to-door marketing and sales channel and later on the Viisiit. e-commerce platform, connected to the door-to-door marketing and sales channel.

The 1001 Year Plan is in essence a phased action plan where every new phase can be unlocked when the minimum funding and/or revenue growth of active projects reaches a certain threshold for self sustainability. Once self sustainability is reached, organic growth and R&D from own funds to keep existing business running and growing will count towards the growth of those companies within the Tiendemanns Group.

1.1 Start of the projects in the 1001 Year Plan

Creating a new global door-to-door marketing and sales infrastructure, where the Tiendemanns Group can add services on top of this infrastructure that Viisiit.® has as task to go realize is a very ambitious plan. One that reaching the soft cap as funding can

make happen and start the sprint of the creation of this new global marketing and sales funnel, that works as a C2C, B2C, B2B, C2B platform, intertwining online and offline commerce. We will start first with the B2B and B2C door-to-door marketing and sales funnels and later in the growth phase of Viisiit.® incorporate the C2C and C2B door-to-door marketing and sales funnels.

Viisiit.® is a low margin company because it doesn't take all the marketing budgets from advertisers/publishers, but incentivizes advertisers/publishers to reward its Welcomers for their time and attention for participating in product presentations. Having PreciousChips® as one of the first portfolio products that Viisiiters can go present to Welcomers creates much needed cash flow and gives the Tiiendemanns Group capital that can be reinvested in the further growth of Viisiit.® too.

Most of the other projects described in the 1001 Year Plan are dependent for their market launch on either market validation or R&D funding, but also for the Viisiit.® platform and Viisiit.®'s team base to have a substantial market share in countries/cities we're launching them. So for most of these projects, as long they don't get filed for the trademark registration, we won't talk about them directly.

1.1.1 What is Viisiit.®?

As the digital era progresses, personal connections start to count more and become more valuable, as they make a more lasting impression on us than digital invitations, marketing, promotion materials and/or interactions. Viisiit.® is the answer of the Tiiendemanns Group to how it can best connect with the real you.

Viisiit.® will start with the door-to-door marketing, promotion and sales channel creation, where advertiser/publishers can connect on a more personal level with current or potential new clients/customers. Viisiit.® will earn its money by selling product introductions, product presentations slots and marketing packages to advertisers. The (potential) clients and customers of advertisers that uses Viisiit.®'s offline product presentation service will be our Welcomers, that get rewarded with money for their attention and time and eventual contribution to surveys during product presentations, paid in the form of a digital currency called ViisiitCoin.

If the advertisers/publishers/organizations want to reward their current or potential clients/customers with something else, like with a real object/sample or with a special experience, they'll need to pay Viisiit.® an extra fee (ViisiitCoin or fiat) when our Welcomers agree to accept their offer.

In general they say that in a business plan you need to mention your competitors in the market. In this whitepaper we are not going to do that, because the service of Viisiit.® is unique in the world. Incumbants, as in existing door-to-door marketing and sales companies will become direct competitors when they start copying the business and revenue model of Viisiit.®. Even then, making Viisiit.® being part of the Tiiendemanns Group, giving it an attention rewarding economy business model and philanthropic-capitalistic mission that are all guided by the 5P-Formula©, we only need to focus on being our best and doing our best to succeed in becoming a transgenerational company.

The problem in the global door-to-door marketing and sales industry is that it currently can only serve companies with ample marketing and sales acquisition budgets. Small and

medium sized enterprises/organizations (SME's) cannot afford hiring a door-to-door marketing and sales company, because of their current business model of going door-to-door only for 1 client at a time. Making it also only attractive for high margin products, services or experiences.

Viisiit.® will change this by bringing an auction system for product presentation time slots delivered by a Viisiiter into the door-to-door industry. This auction system will be connected to a machine learning system that decides which product, service, experience will be presented to our Welcomers first, based on the known preferences of our Welcomer, Viisiiters affinity with the product presentation, chosen auctioned pricing, etc. This way SME's with small marketing budgets can target potential customers/clients in a certain area of interest for them personally through our Viisiiters acting as their brand ambassadors, even if it's for a 1-month campaign a year.

Viisiit.® gives advertisers/publishers the chance to choose for doing Google Adwords or Facebook online campaigns, or Viisiit.® door-to-door promotion campaigns, or other promotional campaigns, or a mix of them all. Viisiit.® doesn't see itself as a direct competitor to online advertising, because our door-to-door service can even be enhancers of online campaigns by bringing what people experiences online into a more personal offline experience. Viisiit.® gives advertisers/publishers a new channel to reach potential new clients/customers, or to connect in a more personal way to their existing clients/customers.

The value in door-to-door product presentations is that we create space for our Welcomers to not only get information about products, services or experiences that they might like, want or need, but we also give our Welcomers time to ask questions about things that they might not understand and/or would like to hear more information about. People like to listen to someone explain something much more than having to read it for themselves.

Viisiit.® can make this now expensive marketing and sales channel affordable for SME's, because of 3 main reasons:

1. The Viisiit.® e-commerce platform linked to our software for the door-to-door services, will be build to better connect the products, services and experiences of our private or corporate partners to our active (global) private or corporate Welcomers we visit.
2. Our auction system for in real life product presentation time slots is including the system for charging advertisers for product introductions, product presentations, lead generations and realized conversions.
3. The fact that our business model is not based on doing rounds and visiting people only for 1 partner/client/customer at a time, we are able to make door-to-door promotion services affordable to everyone, from small and medium sized businesses, to small NGO's, local organizations and even private citizens.

When Viisiit.® creates the option for private citizens to offer their own services on the Viisiit.® platform, as private Welcomers they can use their earned ViisiitCoins from the product presentations to order promotional, marketing and sales services from Viisiit.® directly. This way Viisiit.® can help all our private Welcomers connect to customers/clients and give them a new source of sustained income with their side jobs or hobbies.

To really understand the potential of Viisiit.®, you need to understand that Viisiit.® is more than just a company that does product presentations in real life. Viisiit.® can also do

surveys, qualitative and quantitative market research, new product research for companies/organizations. Viisiit.® can also create personal attention moments for the clients of your organization that you want to for example give a personal thank you to for their business, or congratulate your employees for a special anniversary in an unexpected personal way.

As a private Welcomer, Viisiit.® gives you for example, a new tool to in a personal way invite your neighbours for a block BBQ or garage sale you're organizing, without you needing to go do the personal rounds yourself, paying with the ViisiitCoins you earn by participating in product presentations. Another example would be the use your earned ViisiitCoins to pay to send your registered mail to people/organizations. This is a service that when we achieve scale, we could do for much cheaper than current incumbents.

1.1.2 What is PreciousChips®?

PreciousChips® is a new type of metal playing chips, that you can use to play all your favourite types of poker games, Black Jack, Baccarat, or any other game where you need chips to play with.

The innovation in PreciousChips® is that they are either made entirely from precious metals, like gold, platinum or palladium, or they are plated using a copper-nickel or Nordic Gold chip base. Playing poker with PreciousChips® gives a new dynamic to the game. Play it wisely and you can even use the chips to bluff yourself out of a bad hand. The other advantage with using PreciousChips® is that you are playing games with chips that at least can hold their value. For example, your case of mixed pure yellow, rose and black gold PreciousChips® can become a family heirloom that you leave to your grandkids or that you need to sell during your pension years to pay your mortgage off.

What makes the plated versions of PreciousChips® stand out is that our future partnership with a known chip manufacturer (that we will publicly announce when we sign the contract with them) makes it that we can produce PreciousChips® with either micro-plating layers and in the future guaranteed plating layers. The technology to produce guaranteed plated layers is a R&D project, but once available, we can create a guaranteed 0,5 gram or 1 gram of silver, gold, palladium or platinum layer above a copper-nickel or Nordic Gold based PreciousChips® chip.

All PreciousChips® have the same size as the casino chips you are already used to. So, unlike silver or gold bullions that have different sizes but the same weight (1 troy ounce), a pure silver PreciousChip® is the same size as a pure gold PreciousChip®, only with a different weight. So, especially between silver and gold, you'll be able to tell by the weight alone which one is which.

The cheapest PreciousChip® set will be the ones made entirely from aluminum and the most expensive PreciousChip® set will be the ones made from gold, palladium and platinum, with the actual prize depending on the international exchange rate at that time.

For people that can't afford to buy an entire set of PreciousChips® and thus getting a significant amount of (precious) metals with one purchase, there's the possibility to lock down a (limited edition) set and pay it off in monthly increments. This will lock the price of the (precious) metal(s), so that you are safeguarded by drastic price increases and the

PreciousChips® set will be safely stored in an audited safehouse, until you pay the last payment for the set.

Starting with 10% to eventually perpetually 50% of all profit from the sale of PreciousChips® will go to a non-profit charity foundation that takes the responsibility to help with the cleaning, sustainable redevelopment or reforestation of closed (precious) metal mines. This non-profit foundation that will be called the “More Wild Animals Foundation” will be one of the 2 foundations that will receive 5% of the common shares in Tiiendemanns Holding.

Especially in the beginning, most of the marketing budget for PreciousChips® will be spend through Viisiit.®. This will help Viisiit.® with getting early revenue, but will also help PreciousChips® to present the chips to a bigger public in person faster. This cooperation between Viisiit.® and PreciousChips® also helps the Tiiendemanns Group get to cash flow positive faster.

1.1.3 What is Dutch Joker Poker© and the other projects in the 1001 Year Plan?

Dutch Joker Poker© is a new poker game that isn't on the public market yet. This game is also designed by Alvin and it is a game where you get to use up to 5 different colored Jokers while playing. Using all 5 Jokers greatly increases the difficulty level of the poker game, because you can then make the rarer hands more often.

By giving 2 of the 5 Jokers a different color backside of the card, playing with these Jokers, makes people getting these cards in their hand during the game need to practice their bluffing skills, as everyone will know that you have a Joker in play.

So, in essence, Dutch Joker Poker© was designed to help to remember all the poker hands, because you need to stay conscious of all of them during the game and to help people with their bluffing skills. Because of it increasing the odds of getting the rarer hands, Dutch Joker Poker© is also an exciting version of a game with a different twist on the old poker games.

In this whitepaper we make mention of this new version of poker because the Tiiendemanns Group has already filed the trademark registration to protect this IP described in the 1001 Year Plan. The other IP's described in the 1001 Year Plan we cannot mention in this whitepaper because other than some URL's already bought (like for example www.travellingual.com; which will become a new “personal language service”), the IP's are only protected by a notary IP deposit beginning of 2018, which is something that gives only limited legal protection to IP's. The 1001 Year Plan is a phased plan, so when we file the other trademarks and/or patents we will publicly reveal and explain those new project described in the 1001 Year Plan.

Even mentioning the name “Travellingual” now puts the Tiiendemanns Group in a disadvantaged position, but seeing that the URL's are already secured and for this particular service it is already known that there are 2 startups currently trying to build a similar service somewhere in Eurasia and America, we give this project housed in the 1001 Year Plan as an example of new projects/services that we're going to build on top of Viisiit.® in the future.

For now you can get for example more information on when the new game, Dutch Joker Poker© will become available on the website of the Tiiendemanns Group www.tiiendemanns.com or our twitter profile @Hiinderloopn for updates.

1.1.4 Extra Information about the ViisiitCoin©.

ViisiitCoin is an utility coin. The 3 main use cases of the ViisiitCoin are;

- People we visit receive ViisiitCoins as a reward for their participation in product presentations. Those ViisiitCoins have been bought and/or paid for by publishers/advertisers, including Viisiit.® self, for the sole purpose to reward users that participate in the presentation of their product, service or experience that they want to present to our active/inactive Welcomers.

- All people we visit we call Welcomers. With the rewarded ViisiitCoins, Welcomers can purchase services directly on Viisiit.®'s platform when they become available. Welcomers can also exchange their ViisiitCoins at various exchanges for fiat or other cryptocurrencies.

- Designed as a loyalty bonus for the first generation of ViisiitCoin holders that helped us build the Tiiendemanns Group, the ViisiitCoin blockchain will fork itself 20 years after the DICO/STO. At that moment in time, all holders of ViisiitCoins will receive the same amount of ViisiitTokens when the snapshot of the ViisiitCoin blockchain gets taken and the fork of the ViisiitToken blockchain happens. ViisiitTokens can then be directly exchanged for share certificates in Tiiendemanns Holding B.V..

All transactions on the ViisiitCoin blockchain/platform, running on the Komodo platform, will cost 0,001 ViisiitCoin for everyone to send/receive between ViisiitCoin wallets on the ViisiitCoin platform. 100% of this fee will go to the miners.

The ViisiitCoin will start with a fixed price of \$ 0,06 or € 0,05 per ViisiitCoin, all the while the estimated future underlying share value in Tiiendemanns Holding B.V. that a ViisiitCoin holds through its connection with the ViisiitToken when the ViisiitCoin blockchain gets build is of \$ 0,09 or € 0,075 per ViisiitCoin. Which means that every participant in the (pre) private sale and the public DICO/STO sale automatically receives a 33% discount on the ViisiitCoin price.

This also means that Welcomers that receive ViisiitCoin for their participation in product presentations who receives ViisiitCoin at the initial price of \$0,06 or € 0,05 is also receiving 33% extra ViisiitCoin in accordance to the future estimated exchange value for the share certificates in fiat when the ViisiitToken blockchain gets build. Once the Board of Tiiendemanns Group gets actual revenue data that can back the official estimated future share value price, the shareholders will be asked to raise the official fixed price per ViisiitCoin on the Viisiit.® platform. Once the price per ViisiitCoin reaches parity with the actual price per common share of Tiiendemanns Holding, the official fixed rate will follow the price accordingly.

1.1.4.a ViisiitCoin© division in the different funds

- **200.000.000.000 VC** will be available to be sold in the dICO/STO

With 25.000.000.000 for the (pre-)private sale; 50.000.000.000 for the pre-sale dICO/STO and 125.000.000.000 for the public dICO/STO.

All 4 rounds; pre-private sale and private sale, pre-sale dICO/STO and public dICO/STO, will have different discounted price phases. Buying ViisiitCoins in the dICO/STO overall

means by definition that you're buying them with a discounted price on the price that you would exchange them on the Viisiit.® platform.

All ViisiitCoin in the pre-sale and public dICO/STO will have no lock up or vesting schedule, unlike the ViisiitCoins sold in the pre-private and private sale that will have a lock up period and vesting schedule.

- **375.000.000.000 VC** will go into the Welcomers Reward Fund managed by Viisiit.®, with the ViisiitCoin tied to a fixed vesting schedule. These ViisiitCoin can only be released and given only to Welcomers as a reward for their time and attention, when sold for starting with the nominal price of 0,05 euro, 0,06 dollar, 0,045 pound, 0,425 yuan, 7.25 yen, or 0,065 swiss franc, or in exchange for 1 VC. To buy ViisiitCoin in the Welcomers Reward Fund with other cryptocurrency you need to exchange them first on an exchange for VC then you can buy the ViisiitCoins with those ViisiitCoins to reward our Welcomers through a Viisiiter for their time and attention. These ViisiitCoins are evenly divided and locked in an escrow cycle of 30 years. So each year 12.5 billion VC will be released and afterwards unsold ViisiitCoins will be locked and put back into the escrow cycle and be released back 31 years afterwards.

- **175.000.000.000 VC** will go to the initial Viisiit.®/ViisiitCoin team

With 125.000.000.000 going to the internal team members and 50.000.000.000 is reserved for advisors & external team members, all are subjected to a lock up period and vesting schedule after the lock up period.

- **100.000.000.000 VC** will go to the Promotion Fund to be used as incentive for trying and/or as rewarding coins for using our platform or for the marketing and promotion of products/services from the 1001 Year Plan coming to market. These promotion coins are also destined for the acquisition of both private and public Welcomers. The ViisiitCoins in the Promotion Fund are divided in 6 main subfunds;

1st Global Loyalty Reward Airdrop of 10 billion VC to a maximum of 7.034.688 ViisiitCoin wallet holders who have a minimum of 10 VC in their wallets. First 1001 Welcomers will divide a bit less than 1 billion VC between them and +7 million Welcomers will divide the other +9 billion VC between themselves. This airdrop will happen 7.5 years after the end of the dICO/STO. One ViisiitCoin wallet holder will receive 100 million VC as the most and a bit less than 6 million Welcomers will receive 1000 ViisiitCoins as a minimum.

2nd Global Loyalty Reward Airdrop of 20 billion VC to a maximum of 11.315.090 ViisiitCoin wallet holders who have a minimum of 100 VC in their wallets. First 1001 Welcomers will divide a bit more than 2 billion VC between them and +11 million Welcomers will divide a bit less than 18 billion VC between themselves. This airdrop will happen 15 years after the end of the dICO/STO. One ViisiitCoin wallet holder will receive 250 million VC as the most and about 9.6 million Welcomers will receive 1000 VC as a minimum.

30 billion VC will go into the Welcomers Visit Bonus Fund. Each Welcomer receives a minimum amount of ViisiitCoin for each encounter with a Viisiiter. In the beginning these ViisiitCoins awarded to Welcomers for their greeting and interaction with a Viisiiter, will come from this fund. When this fund runs out, Viisiit.® can decide to include this cost into the fee it charges advertisers/publishers or pay it as business costs on its own balance sheet.

20 billion VC will go into the Country Promotion Fund. These VC will be used by Viisiit.® during the reward campaigns for onboarding Welcomers in new markets it enters. The country division will be at the discretion of Viisiit.®.

15 billion VC will go into the General Promotion Fund. These ViisiitCoins will go into a 15 year escrow cycle, of which each year 1 billion will be released to Hiinderloopn Ventures. At the end of each year, what hasn't been used will go back into an escrow account and will be released back in year 16. These ViisiitCoins will be used at the discretion of Hiinderloopn Ventures for growth through promotion, acquisition and marketing spending.

5 billion VC will go to the Tiiendemanns Group Promotion Fund. These ViisiitCoins will be used at the discretion of Tiiendemanns Holding with the general mandate to be used for the growth of the Tiiendemanns Group.

- **75.000.000.000 VC** will go to the ViisiitCoin Salary Fund of the Tiiendemanns Group; in which 30 billion will be reserved for team members of the Tiiendemanns Group that chooses to participate in a reward program that rewards team members who chooses to take partial or full salary in ViisiitCoin. 30 billion will be reserved for (special) team member acquisition, and the last 15 billion will be parked in the Tiiendemanns Group special team investment-wallet, to either be used as replenishments of a popular rewards program in the fund, or to be used at the discretion of the Board that relates to Tiiendemanns Groups' team members compensation and acquisition
- **50.000.000.000 VC** will go to the Health Fund of the Tiiendemanns Group, which is a fund destined to incentivize healthy behavior in all of our team members. These ViisiitCoins can only be released when team members hit certain predetermined performance achievements.
- **25.000.000.000 VC** will go the General Business Fund, which is the fund that will be used by Tiiendemanns Holding to for example eventually lend to Hiinderloopn Ventures for it to be able to enter partnerships with exchanges, or for the Tiiendemanns Group to make other investments and/or payments, or to enter partnerships with other parties of interests that contributes to the overall growth of the Tiiendemanns Group.

1.1.4.b ViisiitCoin Tokenomics

The ViisiitCoin is essentially utilized in two ways: 1) direct ViisiitCoin payment, 2) Indirect ViisiitCoin payment. We will cover these two consecutively in this whitepaper.

1) The direct payment

All services on the Viisiit.® platform can be paid for with ViisiitCoin. The buy value of a ViisiitCoin will start with a base value of 6 dollar cents (or 5 euro cents), and increase (TD). The buy value is the amount in dollars (or euro) that 1 ViisiitCoin will buy you on our platform. Other fiat denominations, like the yuan, swiss franc, yen or pound, have fixed conversion rates with the ViisiitCoin on the platform too.

The official Viisiit.® buy value can only change with shareholders approval of Tiiendemanns Holding B.V.. As this is the starting statutory price that 1 ViisiitToken will be redeemably worth when they can be exchanged for common share certificates in the Tiiendemanns Holding B.V..

2) The indirect payment

You can also pay with fiat on the Viisiit.® platform, because we want maximum accessibility. However we still care about our hodlers, so the amount of fiat that needs to be paid will be calculated with:

(Cost of product / buyvalue of ViisiitCoin) * ViisiitCoin price on exchange.

Buying ViisiitCoins on exchanges for our direct clients to use our service, for example from the Welcomers Reward Fund, is only when there's no funds that Hiinderloopn Ventures can use to sell the ViisiitCoins starting at 0,06 dollar, 0,05 euro. In any case, ½ of this money is used to have a stack of fiat to pay taxes and other conventional expenses, ½ will be used to buy ViisiitCoin from the exchange and be send to the Viisiit.®-Business VC-Wallet. From the Business VC-Wallet we pay the eventual (partial) salaries, freelancers, vendors and other business expenses that can be paid with ViisiitCoins.

So even when bills from Viisiit.® are paid to the company in fiat, Viisiit.® will always change half of what it gets to ViisiitCoin through the exchanges. This measure is to protect against (hyper) deflation and the underlying value with indirect linkage to the common share certificates to Tiiendemans Holding B.V. through the ViisiitTokens.

Thus even when people pay with fiat currency on the Viisiit.® platform, there will be ViisiitCoin demand on the exchanges, creating a steady increase in not only demand, but leading to an expected balancing and less volatile price swings on the exchanges, with free market prices following and exceeding the fixed price setting on the Viisiit.® platform.

To help with the growth of the Tiiendemans Group and to combat and/or protect Tiiendemans Group against hyperinflation on the public exchanges there will be exchanges between Tiiendemans Holding B.V. and Hiinderloopn Ventures of ViisiitCoins in exchanged for common share certificates. Starting in the pre-private sale with 100 million common share certificates sold by Tiiendemans Holding B.V. to Hiinderloopn Ventures B.V. for 1.3 billion ViisiitCoins going to the Tiiendemans Holding VC-Wallet with the 5 year lock up period and 10 year vesting release schedule after the lock up period, same as every other participant in the pre-private sale.

For Viisiit.® it's an advantage to have lower price on the free market, especially when it needs to change its fiat for ViisiitCoin, so even in the beginning, it's expected that the dance between the free market and the fixed price will not be too wide from each other. Price stability on the free markets is for the Tiiendemans Group important, because we want in the future our team members to have the freedom and can feel secure to receive their whole salary in ViisiitCoin. This way they (or our Welcomers with their earned ViisiitCoins) can roam the globe and pay with their ViisiitCoins without needing to pay for example for conversion costs across borders, all the while paying almost nothing in transfer fees, especially between ViisiitCoin wallets.

The logo for Viisiit, featuring the word "Viisiit." in a stylized, orange, sans-serif font. The letters "i" and "i" are replaced by small human figures.

ViisiitCoin

1.1.5 Extra information about the ViisiitToken©

The ViisiitTokens are a loyalty bonus point, that is in essence a security token, because it is statutory agreed that after the ViisiitTokens are created they can be redeemed for common share certificates in Tiiendemanns Holding B.V.. The fork creating the ViisiitToken blockchain will happen after 20 years, on December 31st after the dICO/STO of the ViisiitCoin sale. At that moment in time, every ViisiitCoin holder will receive 1 ViisiitToken for each ViisiitCoin that they held when the snapshot gets taken 00'o clock CET on that day. When at least the soft cap is reached at the end of the dICO/STO beginning of 2021, then the fork will happen on the 31th of December 2041.

Besides being a loyalty reward for having the patience for us to build a new global door-to-door marketing and sales funnel, this 20 years horizon is chosen, because it's a point in the future where we can confidently set the estimated fixed starting price point per ViisiitCoin, while holding a 50 year horizon. In this 20 year horizon not only will we be able to verify this starting fixed price point, but we will be also able to adjust the price point when we have the data to backup the new fixed price point.

The 20 year time horizon is also enough to bring actual lasting real life value to the shares and gives us thus the opportunity to give better longitudinal projections about the financial future of the Tiiendemanns Group. These financial projections is important for ViisiitToken holders because the price of each ViisiitCoin is an indication of the real market value of a ViisiitToken. We're starting with a fixed price per ViisiitCoin that represents only $\frac{2}{3}$ of the lowest estimated price per share with a 50 year horizon. So the first adjustment would be the adjustment to 100% of the lowest bound of the estimated share price with a 50 year horizon, which will ask the shareholders to increase the fixed price of each ViisiitCoin exchanged on the Viisiit.® platform to € 0,075 or \$ 0,09 per ViisiitCoin.

Holders of ViisiitToken can directly after creation of the ViisiitToken blockchain, exchange their tokens for share certificates. Redeeming the certificates directly for fiat will be made possible, but only under certain circumstances and/or after payment of a fine or other devaluative terms during a set amount of time after the creation of the ViisiitToken blockchain, until they can be redeemed for the then valid market price. All terms will be made public in due time.

This future debt obligation will be booked on the books of Tiiendemanns Holding B.V. and the sales and management of the certificates is done through the Tiiendemanns Group Trust. The short term debt obligation for the payment of the underlying common shares linked to the ViisiitTokens are the responsibility of Hiinderloopn Ventures B.V.

The services of Viisiit.® together with the ViisiitCoin blockchain are designed to withstand the test of time. In the grand scheme of life, 20 years between generations is nothing. Still, in the event of the inevitable, we make it easy, for when you too care for the future generations, that you can select in your Viisiit.® profile attached to your wallet, who you assign to be your heir(s) to your ViisiitCoins/ViisiitTokens. You can even select to give (a portion away) to the charities of your choice.

2. Commercial model: Revenue model

The revenue model of the Tiiendemanns Group is in broad terms explained; seek major funding to start with projects that will need to start generating their own revenue, that will also start contributing to the bottom line of the group. This will result in the Tiiendemanns Group generating its own finances, enough to start with at least the R&D of new projects, so that in the end we need to sell less equity to raise more funds to invest in the growth of the group overall.

The revenue model of the Tiiendemanns Group itself through Tiiendemanns Holding can be divided in two parts;

Firstly, sell itself through its two classes share system and by selling ViisiitCoins and later a security token, called ViisiitToken to gain venture capital funding. Secondly, bring new services and products to the global market through subsidiaries of which it will receive dividends payments when the subsidiaries turn profitable.

Due to business competitive reasoning no actual revenue projections will be given in this whitepaper. We're only going to descriptively (try to) explain to you how will we start generating revenue.

2.1 The different revenue streams inside Viisiit.®

The first revenue generating source of income for Viisiit.® will come from advertisers that will use the services of Viisiit.® so that Viisiit.® can present their products personally to our Welcomers. This personal product presentation can be presented to our Welcomers depending on their wishes, budget and product, service or experience that needs to be presented, either through digital ads or real life sample/ads. So, this revenue stream is called the promotion stream and it's through product introductions and product presentations. When Viisiit.® is successful in linking products to its Welcomers, then Viisiit.® will receive a bonus fee for the desired/agreed conversion and/or sales.

Another revenue stream for Viisiit.® is the marketing stream that will be available as a service to advertisers that need help with their marketing strategy and/or the marketing materials, digital and non-digital materials. To help with scaling Viisiit.® faster, in the beginning years Viisiit.® will mostly use the services of freelance marketers and designers and charge our clients at cost price, or less, if they enter longer contracts and/or higher monthly subscription tiers.

In the growth stages of Viisiit.®, we'll expand our services to also include actual services that our Viisiiters can do, either for themselves directly (like cooking, gardening or cleaning houses), while Viisiit.® earns a fee for these transactions, or through services that Viisiiters do for a partner of Viisiit.®, for which Viisiit.® will also receive a fee for these transactions.

Viisiit.®, the door-to-door service, is designed to be a low margin business, because of the choice to give parts of our revenue streams to our clients, we call Welcomers. The high margin businesses belonging to the Tiiendemanns Group can then profit together with our external partners from this new direct promotion, sales and (future) distribution channel.

2.1.a Understanding the commercial model of Viisiit.®

For you to understand the commercial model, you need to understand that Viisiit.® is the first C2C, B2B, B2C & C2B multi service door-to-door service provider. Viisiit.® has a marketing and promotion branch on its service platform, but Viisiit.® also serves as a self facilitator of services. Thus Viisiit.® works both as a double SaaS company (Software as a Service & Service as a Service).

As a Service as a Service company, Viisiit.® will start as an actual real time service provider company, then morph into a real life and online service provider company. As a Software as a Service company we'll emerge when we start licensing our door-to-door software to partner franchisees around the world. By having franchisees working under the Viisiit.® name all over the world, we can achieve our ultimate goal of connecting with everyone on Earth that welcomes us much faster.

Besides being a double SaaS company, Viisiit.® is also a MaaS (Marketing as a Service) company, because of its service to advertisers/publishers, from SME's to large organizations needing extra help with designing their marketing strategies or organizations that need help with producing their marketing materials.

The focus in the interaction with our Welcomers will be, to bring in real life pleasant and insightful experiences to our Welcomers. Because of that we'll take the personal approach to mostly communicate directly with our Welcomers in person at their homes or businesses/organizations. Purely administrative communications for example will be done through online media/platforms, like through our own Welcomers portal, that is their Viisiit.® profile linked to their ViisiitCoin wallet, that is also linked to the e-commerce and "offline" platform.

Viisiit.® is going to start with the product presentation service and as we grow, the product presentation service will evolve into other services that Viisiit.® is going to offer to all types of Welcomers. Through this promotion stream, Viisiit.® is there to give a human face to for example all the webshops in the World (starting with the west European mainland - market; the Netherlands, then Benelux/Germany), to give the bakers, butchers, small shop owners, and many other (niche businesses and organizations) the chance to directly pay/reward their (potential) clients/customers for their attention, so that they hear and create a moment of attention for what they (the advertisers/publishers) want to present to them.

Viisiit.® starts as a B2B and B2C service, but especially as a C2C and C2B service, Viisiit.® can give communities the ability to connect again with each other and give our Welcomers the ability to earn extra (or their full) income on the Viisiit.® platform. Because with the arrival of the internet, one thing that hasn't been discussed much yet is the problem that many people face now, which is not having enough time to do all the things that they've accumulated (because of the internet showed them) as desires to go do in their lives. Connecting people directly so they get help to free up time in their life or so that they can get a meaningful addition or experience in their life is what Viisiit.® is set to do. Viisiit.® earns a bonus when it succeeds in helping its Welcomers have a better quality of life.

To not be dependent on the outcome of the dICO/STO, in the testing and market penetration phase, Viisiit.® will start experimenting with different revenue models and streams, generated by all the 3 types of Welcomers. For example, to start, every

advertiser (business/public Welcomers) that wants us to show our public and/or private Welcomers their advertising and/or product, will need to pay an introduction fee, comparable with a targeted banner click on the internet, but for that money advertisers will get a Viisiiter, their brand ambassador, that actually knows their products/services by heart and chooses to go talk about it because she/he wants to.

Once the other projects in the 1001 Year Plan starts, they will be generating extra revenue for Viisiit.®, because of the fact that Viisiit.® will take their marketing, promotion and (later) distribution over for them. The revenue and profit they make will also contribute directly to the bottom line of the Tiiendemanns Group, reinforcing the overall ViisiitCoin structure more, giving it a more sturdier value that will even hold after the creation of the ViisiitToken blockchain.

2.2 The commercial model of PreciousChips®

PreciousChips® is one of those high margin products that will benefit directly from the creation of the door-to-door promotion, sales and (future) distribution channel, called Viisiit.®. This is because Viisiit.® can explain the subscription model in person the best, but also each Viisiiter can carry some samples PreciousChips® to let our Welcomers feel a PreciousChips® for themselves. PreciousChips® is also a product that for its start, it's not dependent on Viisiit.® to go to market, like most of the other projects described in the 1001 Year Plan are and it can greatly contribute for a healthy cash flow for the Tiiendemanns Group quite rapidly after entering the (global) market.

There are 3 revenue streams for PreciousChips®;

- The direct sales of (cases of) PreciousChips®, of which Hiinderloopn Ventures receives a lower margin on these sales. You can buy PreciousChips with fiat or select cryptocurrencies, including ViisiitCoin.
- Through a (short (1 year) and long (max. 30 year) term) subscription model in which Hiinderloopn Ventures starts receiving payments for (cases of) PreciousChips® and (later in time) will need to pay the Royal Dutch Mint in full to produce the (case(s) of) PreciousChips® when the last subscription payment is done the case(s) can be send.
- Or last revenue stream, is still in concept phase, but for the insurance fees that consumers pays for if they need to sell their PreciousChips® at a loss during x years after sale and/or end of subscription and be compensated for the price difference.

Nobody can predict the future and its Hiinderloopn Ventures' wish that everyone that buys a case or more, buys them because they want to keep them forever and pass those beautiful metal chips down to future generations for them to play poker, black jack, baccarat or whatever new game they invent in the future that you need chips to play with. Because there will come a time, that there won't be all of the metals we're starting with being mined to be able to produce cases of/or with them. So whoever owns a PreciousChips® case of a metal that cannot be mined anymore is holding a very expensive collectors item in their hands, where purely the price of the metal(s) will surely do a tremendous jump based on its natural scarcity.

Historically gold beats inflation and keeps rising significantly just purely for its natural scarcity and natural characteristics. There are times when for example countries and/or central banks go on buy binges of gold to increase their gold reserves that it (temporarily) decreases the global price of gold and/or keeps it almost flat for an extended period of time. The insurance would be to compensate the deficit you encounter, if you come in

time where you really need to liquidate (some of) your PreciousChips® and the price of the metal type(s) at that moment in time is lower than when you bought it.

If you know you will keep your PreciousChips® for a (really) long time, then you probably don't need a price deficit insurance, but it will be there for if there's any surprises. If/when the insurance project gets to market, we will leave the PreciousChips® to be the high quality and fair premium priced products and the price deficit insurance to be the high quality and low priced product, so everyone that wants can make use of it, even buyers of the basic PreciousChips® metal sets.

2.3 Sales and marketing strategy for Viisiit.® and PreciousChips®

3. Use of resources and proceeds from the pre-private sale

Your participation in this pre-private sale of the ViisiitCoin goes for more than $\frac{2}{3}$ in the market penetration and growth of Viisiit.®, starting in the Netherlands. The rest, depending if we either reach the soft cap or the hard cap, will go into the preparations and start of the other projects in the 1001 year plan and into the preparation for the private sale and the pre-sale dICO/STO, payment to lawyers for the eventual prospectus (even though we are not doing a security token offering, yet), and for promotion, advisory and (business operation and maintenance costs for the ViisiitCoin blockchain on the Komodo network.

Together with growing our team, funding overall in the dICO/STO will help Viisiit.® start with the development and implementation of AI and Machine Learning into the Viisiit.® platform. This is so we can start feeding our proprietary software with the information we gather when we go visit our (potential) clients and/or when our clients/customers come in contact with us and/or use our services. As time goes by we will receive more accurate feedback from our proprietary software to better serve our Welcomers needs and wants.

3.1 Use of proceeds when soft cap is reached

The soft cap in the pre-private sale will be set at € 1.5 million. That is thus excluding the 6.6 billion ViisiitCoin sold internally, which leaves 8.4 billion VC left to be sold in the pre-private sale. Every cryptocurrency obtained as payment in the pre-private sale will be exchanged for fiat up until we hit the soft cap. Reaching the soft cap means that we'll divide those proceeds as follows:

€ 100.000 - For the development of the production software of Viisiit.®, and to start small investments in R&D of the Viisiit.® technologies and upkeep and maintenance of the ViisiitCoin blockchain.

€ 225.000 - Invest in business operations of Viisiit.®, like Viisiiters hardware needs and transportation costs and the rest of Tiiendemans Group, including salary and insurances obligations.

€ 500.000 - Invest in extra Viisiiters and growth of the service offering in the Netherlands/ South-Holland region.

€ 100.000 - Invest in brand recognition and the promotion of the Viisiit.® service.

€ 125.000 - Invest in legal, marketing and contingent costs for the private & preparations for the dICO/STO sale.

€ 350.000 - pay of the first batch of common shares in Tiiendemanns Holding destined for the team members.

€25.000 - Invest in (future) price disparity liability payments; Viisiit.® and the Tiiendemanns Group will only vote to increase the amount of ViisiitCoin (max. 10%) when the prices on the exchanges become too detached from the estimated share price. The price disparity investment will be to safeguard Viisiit.® for when the prices on the exchanges are much more than \$ 0,06 or € 0,05 per ViisiitCoin. That acts as an insurance for when Viisiit.® needs to buy ViisiitCoins on the exchanges, for example, to obey its salary payment obligations, or to buy for itself the Welcomers Reward ViisiitCoins when there aren't anymore that can be used from the Promotion Fund. Our first choice in that case is to divide and invest/park this money under management in passive funds and/or internal investments in other projects from other entities in the Tiiendemanns Group. In the beginning we will need to reserve less funds than in the later years when VC Funds start to deplete.

€ 75.000 - Fund for unexpected black swan costs and events.

3.2 Use of proceeds when the hard cap reached

When the hard cap is hit, that will mean that we sold all available 15 billion VC. When that happens, we'll divide the earnings, by paying a larger portion of the share payment debt obligation to Tiiendemanns Holding. With the rest of the proceeds above the soft cap, we'll keep 50% of every crypto holding and we'll exchange 50% of each crypto holding into fiat.

Of the available 8.4 billion coins that are left to be sold in the pre-private sale, if we take into consideration that the first buyer is also a maximum buyer, then there will be about 5.6 billion VC over. If the second buyer is also a maximum buyer, then there will be about 3.6 billion VC left. In the case that the third buyer that gets the extra bonus is also a maximum buyer, then there will be about 1.9 billion VC left to be sold.

When this takes place and all ViisiitCoins left are also sold in the first period for € 0,00075 per ViisiitCoin, then we'll have raised a minimum of € 4.5 million. Selling all 15 billion ViisiitCoin, but having no maximum buyer and/or no maximum buyer fast enough to be one of the first 3 bonus receivers, makes that we'll raise a larger amount than the € 4.5 million.

This is of course, excluding the 6.6 billion VC already internally sold in exchanged for common shares valued at € 5 million in the holding company, which will bring our total amount raised to € 9.5 million, with € 5 million paid in common shares and € 4.5 million paid in fiat or cryptocurrency.

Raising the minimum of € 9.5 million in the private sale, will mean that the proceeds will be used as follows;

€ 500.000 - Will go to invest in R&D and the start of the production software of the Viisiit. platform and integration with the ViisiitCoin blockchain.

€ 600.000 - Invest in business operations of Viisiit. and the rest of Tiiendemanns Group, including salary and insurances obligations.

€ 1.25 million - Will go to growth of the SSSIIR-team with new Viisiiters, and start tapping the different revenue streams. Viisiit. will create a couple of testing grounds around the world, but the Benelux/Germany region will become the main service testing ground for Viisiit., which is the area we'll start exploring with this fund.

€ 200.000 - Invest in brand recognition and the promotion of the Viisiit. service.
€ 650.000 - Will be used to pay of a portion of the payment of the shares in Tiiendemanns Holding B.V.. This money will either flow back to Hiinderloopn Ventures to reinforce weak points in the business of Viisiit., or to start with other projects in the 1001 Year Plan that will need to make use of the services of Viisiit. for most of their marketing, promotion and sales handlings.
€ 5 million - Is in value of the common shares sold for ViisiitCoins, that will go to funding of the start of the later projects in the 1001 Year Plan that Hiinderloopn Ventures will take on in the future. Not necessarily the first ones, seeing that they are set to be released/ exchanged for ViisiitCoins in different vesting schedules.
€ 500.000 - These proceeds received will go to the funding for the start and eventual growth (when market penetration successful) of at least 3 new projects in the pipeline of the 1001 Year Plan.
€ 350.000 - Will go to cover the costs relating to organizing the private-sale & pre-public dICO/STO and to cover partnership agreement costs with exchanges.
€ 250.000 - Invest in (future) price disparity liability payments
€ 200.000 - Fund for unexpected black swan costs and events.

3.3 Use of resources

The biggest resource pool we start with is the ViisiitCoin-blockchain, later the ViisiitToken-blockchain and also our statutory regulated share structure of 2 classes of shares. The most valuable resource pool we will need to acquire are our Viisiiters team members and our Welcomers. Viisiiters are not only the face of the Tiiendemanns Group and the brand ambassadors of (external) brands, products, services and experiences, but they also act as our personal customer service agent for both the Tiiendemanns Group and all of our external partners.

This organization is set up like this from the start so that long term, we can save a lot of money by not having to reorganize and/or restructure the organization. It also gives us the ability to focus on what matters most, customer satisfaction and quality of our products and services, by creating and providing each and everyone of our clients or customers with the best service or products possible, at the most competitive price, in which quality cannot be sacrificed for laziness, cheapness or impatience.

Even when we reach our hard cap, every organization in the group will always be run as a startup and like we're perpetually bootstrapped, and not only do we need to go earn our luxury, but we need to be selective and frugal in the amount of luxury we allow ourselves to have.

So the plan is to start in the Netherlands and in 5 years, with among other things your financial backing, be in at least 10 other countries and operating and/or able to cover the grounds of at least 1.000 cities/municipalities, when the short cap during the dICO/STO is met. It's going to be at least 50 other countries and operating and/or able to cover the ground of at least 5.000 cities when the hard cap is reached at the end of the dICO/STO.

Just as an example, the Netherlands, the country in which we'll start with the door-to-door services of Viisiit.®, has 380 cities/municipalities and in 5 years we need to be active and/or able to provide our services in every one, or at least most of them, depending market circumstances.

4. Road map

This road map is made based on the assumptions that we will raise a minimum of 500.000 euro in the first equity Alpha Seed funding round ending at the beginning of the 3rd Quarter of 2019. This funding amount was not included in the budget given for the proceeds of the ViisiitCoin sale, because with this funding we will start with the MVP of both Viisiit.® and PreciousChips® and use the proceeds of the ViisiitCoin sale to fill the extra budget requirements for scaling the services further.

This road map is also based on the assumption that we will reach at least all 4 soft caps in the pre-private, the private sale, pre-sale dICO/STO and public dICO/STO. The pre-private sale of the ViisiitCoin started beginning of week 50 at 00'clock, thus on December 10th: with the ViisiitCoin price at € 0,00075. We will enter the second period of the ViisiitCoin pricing, 2 weeks after the graphical version of the pre-private sale whitepaper, version 1 has been published.

Not reaching one or more soft caps means that we'll need to delay the plans for 6 months to 24 months. Reaching the hard cap means some projects will start earlier, and will make the horizontal market penetration of the different services of Viisiit.® go much faster. This means that we will be able to spread in more areas and covering more grounds around the world sooner. This will have a better effect on the liquidity and value creation for the ViisiitCoin, because of the diversification of concentration of the ViisiitCoin in different regions, balancing regional disturbances and/or sudden interest/price surge/drop.

2015 - 2017 - The development, market research and market validation of the 1001 Year Plan has taken the founder almost 2 years, from the beginning of 2015 to the end of 2017. This was because getting good paying clients for the consultancy back then was time consuming and capital expensive, so when the consultancies went into hibernation, the time was needed to work temp. agency work besides doing the R&D for the 1001 Year Plan. On top of this the founder felt that he also needed to increase his knowledge on general business practices on the level that a MBA graduate would have.

2018 - Beginning of 2019 The funding expectation was to receive the first big funding after the summer of 2018, of which this failed, because the founder for example not having wealthy people in his core network that could serve as an angel-investor. For which beginning of 2019 the founder entered in partnership with Impakt Tribe beginning and if all goes correctly, we'll have the first funding round completed at the end of the second quarter of 2019.

The funding might not have been found, but during the whole of 2018 the founder did a lot of networking and met not only potential future investors, but also potential future team members and/or partners that can help the Tiiendemans Group grow bigger and faster.

3rd & 4th Quarter of 2019 -

The first draft of the ViisiitCoin whitepaper, version 1 is published on different social media channels.

Equity investment round with ImpaktTribe (successfully) finished and the Tiiendemans Group officially gets incorporated

- Active promotion and marketing targeted to accredited buyers starts for the pre-private sale of the ViisiitCoin.

- Start physical testing phase of Viisiit.® with small portfolio and with only an analog MVP of the Viisiit.® software and the physical testing phase of Viisiit.® will be done in more regions in South-Holland and other interesting regions/cities in the Netherlands due to new Viisiiters in the team.
- The pre-private sale ends and the ViisiitCoin blockchain gets created as a Komodo assetchain.
- Development of the actual (digital) production software of Viisiit.® starts, and will only run on “paper ViisiitCoin” in the alpha/beta phase of the software.
- A few weeks after when the beta software testing is finished and the first production version is ready, the public launch of the service offering of Viisiit.® will officially start in the Netherlands. That is only if we hit the soft cap in the pre-private sale that it will be a national launch for the Netherlands. If we don't hit the soft cap, then it will be a regional soft launch for the Holland region.
- First 10 PreciousChips® cases have been directly sold and first 100 subscription to a PreciousChips® case has been sold.

1st Quarter of 2020 -

- The publishing of whitepaper 2 private sale edition and start of the private sale.
- Full integration Viisiit.® blockchain/wallets with the Viisiit.® software complete..
- Market testing outside the borders of the Netherlands already started.
- Viisiiter-team members count will further increase to about 25 in the Netherlands.
- Start developing smartphone apps for Viisiit. profiles and wallets.
- Expected first 1.000.000.000th ViisiitCoin is rewarded through a promotion from the Promotion Fund. These will be mostly ViisiitCoins released all across the globe, because they will be rewarded through bounty challenges and stored into smart contracts, until they can be released because of a personal connection has been made between a Viisiiter and the wallet holder.
- First 100 PreciousChips® cases have been directly sold and first 1000 subscription to a PreciousChips® case has been sold.

2nd Quarter of 2020 -

- Start with offering of products and services on the Viisiit.® e-commerce platform from partners and Viisiit.® self.
- End of the private sale of the ViisiitCoin.
- Viisiiters-team members count will further increase to about 100 Viisiiters depending revenue results of Viisiit.® in the Benelux/Germany area.
- Announcement of first 5 partner exchanges
- The publishing of whitepaper 3.0 pre-sale dICO/STO edition and start promotion of the public pre-sale of the ViisiitCoin.
- First 500 PreciousChips® cases have been directly sold and first 5.000 subscription to a PreciousChips® case has been sold.

4th Quarter of 2020 -

- Continue promotion of the public pre-sale of the ViisiitCoin.
- Start with first other EU market testing outside of the Benelux/Germany area.
- Finish development for smartphone apps for Viisiit.® profiles and wallets.
- Grow team to about an extra 100 Viisiiters Benelux/EU (depending revenue results).
- Start with the offering of Cashback programs with partners and start with offering direct ViisiitCoin payment options in (web)shops from partners
- First 1.000 PreciousChips® cases have been directly sold and first 10.000 subscription to a PreciousChips® case has been sold.

At least 1 of the 2 products in the 1001 Year Plan that started after Viisiit.® should have reached operational profitability already.

1st & 2nd Quarter of 2021 -

- Start with some feelers in non-EU markets.
- Start of public pre-sale of the ViisiitCoin.
- Expected third 1.000.000.000th ViisiitCoin is rewarded through an online promotion / bounty campaign from the Promotion Fund.
- First 2.500 PreciousChips® cases have been directly sold and first 25.000 subscription to a PreciousChips® case has been sold.

3rd & 4th Quarter of 2021 -

- Grow team to about an extra 25 to 100 Viisiiters for non-EU markets.
- End of the public pre-sale of the ViisiitCoin.
- Expected fifth 1.000.000.00th ViisiitCoin is rewarded through a promotion from the Promotion Fund.
- First 1.000.000.000th ViisiitCoin is rewarded to a Welcomer (so at least € 50 million in revenue has been made at this point by Viisiit. with only counting the Welcomers Reward ViisiitCoin-sales).
- The publishing of whitepaper 4.0 public dICO/STO edition and promotion of the public ViisiitCoin sale starts.
- First 5.000 PreciousChips® cases have been directly sold and first 50.000 subscription to a PreciousChips® case has been sold.
- Depending on revenue increase and outcome of the pre-sale; further market penetration in some to a few more EU and non-EU countries.
- Promotion for the public ViisiitCoin sale continues.
- With about an extra 100 to 500 Viisiiters spread evenly between EU / non-EU.
- Expected seventh 1.000.000.000th ViisiitCoin is rewarded through an online promotion / bounty campaign from the Promotion Fund.
- First 10.000 PreciousChips® cases have been directly sold and first 100.000 subscription to a PreciousChips® case has been sold.

Beginning of 2021 -

- Start and end public dICO/STO sale.
- Start with more extensive non-EU international market testing and market penetration
- We'll make the announcement here about our next 20 to 45 exchange partners.
- By this time we would have welcomed more than 1.000 to 2.500 extra (internal) Viisiiters that will be working all around the World, amount dependent on market conditions.
- Expected tenth 1.000.000.000th ViisiitCoin is rewarded through an online promotion / bounty campaign from the Promotion Fund.
- First 25.000 PreciousChips® cases have been directly sold and first 250.000 subscription to a PreciousChips® case has been sold.

Around the 4th of Quarter 2022 -

If hard cap was met then, we will start around here with the vertical growth in the most promising (international) regions and announcement of next 50 to 300 partner exchanges, depending on the quality of the exchanges then. Otherwise, if only the soft cap is reached, we'll use the resources we got to work on the growth and further market penetration of primarily Viisiit.®, so then the growth steps will need to only happen on a much slower pace, and will only be able to announce about 50 to 100 extra partner exchanges.

If the hard cap is hit then by this time Viisiit.® will have more than 5.000 extra Viisiiters spread all over the World already, visiting and rewarding our Welcomers for their attention. Around this time we will have sold our first 50.000 PreciousChips® case, and the first 500.000 subscription to a case has also been sold.

2023+ - To the stars...

Long story short: with the 1001 Year Plan, the Tiiendemanns Group is more a “shoot to the stars” kind of company, than a shoot “to the moon” type of company. Metaphorically speaking, humanity has visited the moon in the 60’s already, we need to dare to also look beyond the moon, and Elon (Musk) has Mars covered already.

5. Team

With internal team members we mean people all over the world on payroll of Viisiit.®, Hiinderloopn Ventures or in some cases only Tiiendemanns Group. External team members are team members that are paid commission based and/or project based with fiat, share (certificates), with ViisiitCoins or a mix of 2 of all 3 of these. We are starting in the Netherlands and the first HQ will be seated in the Netherlands. Being able to visit everyone in every country is the core mission of Viisiit.®, so growth will also be dependent on the first activities of the independent teams outside the starting markets. This pre-private sale already will count heavily in which countries/regions Viisiit.® will start its services next.

5.1 Internal team members

There are 125 billion ViisiitCoin in this fund to be divided among the internal team members of Tiiendemanns Group. With most will go to the Viisiit.® and ViisiitCoin team, not counting the Founder’s share. We strive for transparency and honesty, so we also divulge how the ViisiitCoins will be divided and if it’s performance based or not. In which latter case, they will only be subjected to a lockup and vesting schedule. Most performance based releases will be without lockup period, but subjected to a vesting schedule.

The internal team here means, everyone working under Tiiendemanns Group, including team members from Viisiit.® and the ViisiitCoin team. Tiiendemanns Holding will start with 1 sole director (Alvin) and +10 (small) investors/share certificate holders, with 1 vacant Board seat reserved for an angel/accredited investor and 3 vacant Board member seats reserved for institutional/accredited investors. Both statutes of Tiiendemanns Holding and Hiinderloopn Ventures make it easy for Alvin to hire new directors, executives or managers into the management team. As Chairperson of the Tiiendemanns Group Trust, which holds the majority (dormant) voting rights in Tiiendemanns Holding, has veto power over specific business decisions, for example about workforce choice and selling or taking Tiiendemanns Holding or one of its subsidiaries public.

The internal team will start small, with Alvin as the centralized figure that will have as main responsibility the growth of the team, and needs to go find and choose team members that will go take responsibility for the different product and services in the group, as will become the other main starting responsibility of Alvin, the start and growth of Viisiit.®.

As you can see from all the vacancies: we’re hiring! And if we hit the soft cap, we’ll need to hire even more team members, especially new Viisiiters.

You can contact or chat with a team member online through their personal accounts or through these ViisiitCoin team accounts:

Drs. Alvin Leito, MSc (co-writer Whitepaper)

Founder, president, chairperson & ceo of the Tiiendemans Group / Tiiendemans Holding B.V.

Chairperson and Director of Tiiendemans Group Trust

Chairperson and Managing Director for Hiinderloopn Ventures; Viisiit.® & PreciousChips®
7-Star Viisiiter

ViisiitCoin Team reward: 5 million founders reward - 2 year lock up after block creation, instant release afterwards. 10 billion non-performance: 5 year lock up after dICO/STO - after which, 20% release, then 30 year vesting schedule, yearly release & up to 20 billion performance based, with no lock up and 30% immediate release, then the rest being released during a 5 years vesting schedule after performance achievement, with quarterly release.

Bio of Alvin:

From young he called himself a pacifist and was passionate to leave the world in a better state than when he was born. At 18 Alvin went to study Psychology at the Leiden University in the Netherlands and later on also went and finished a MSc in Public Administration. Because his initial goal was to leave the world in a better place through politics and becoming the best politician in the Kingdom of the Netherlands. When the realization set that he cannot be his best self being a politician, he went to do what he was planning to go do after he was done in politics, becoming a businessman. After having searched and pondered on a niche to enter, he founded T.C.P.A. Consultancy and T.C.P.A. Guidance Center. to consult both organizations and people in general mainly about self growth and self betterment. For organizations he chose to advocate to put people (the core of an organization, its team members and its clients and customers) before processes and profit. This believe together with the Peace and Prosperity-Equation© became the basis of the 5P-Formula©. Using the 5P-Formula© to create a transgenerational global organization that works to service and enhance the lives of human beings is what he is set to do in this life, inshallah.

5.1.2 Representing Viisiit.® and ViisiitCoin© directly:

(Vacant)

ViisiitCoin-Blockchain Lead - Responsible for the creation and maintenance of the ViisiitCoin-Blockchain.

ViisiitCoin Team reward: up to 2 billion non-performance: 2 year lock up after dICO/STO - after which, 30% release, then 20 year vesting schedule, monthly release & min. 500 million up to 3 billion performance based, with no lock up and 2 - 5 years vesting schedule after performance achievement, monthly release.

(Vacant)

Marketing & Customer Relation Officer for Viisiit.® & ViisiitCoin

2 or 3 -Star Viisiiter (starting either as 1 or 2-Start Viisiiter)

ViisiitCoin Team reward: up to 500 million non-performance: 5 year lock up after dICO/STO - after which, 30% release, then 10 year vesting schedule, monthly release & up to 500 million performance based, with no lock up and 5 years vesting schedule after performance achievement, monthly release.

(Vacant)

Marketing & Online Communication Officer for Viisiit.® & ViisiitCoin

2 or 3 -Star Viisiiter (starting either as 1 or 2-Start Viisiiter)

ViisiitCoin Team reward: up to 500 million non-performance: 5 year lock up after dICO/STO - after which, 30% release, then 10 year vesting schedule, monthly release & up to 500 million performance based, with no lock up and 5 years vesting schedule after performance achievement, monthly release.

(Vacant) Up to 20x starting open vacancies when we hit the soft cap in the pre-private sale

B2B Service Representative

2-Star Viisiiter (starting either as 0 or 1-Start Viisiiter)

ViisiitCoin Team reward: up to 250 million non-performance: 3 year lock up after dICO/STO - after which, 30% release, then 10 year vesting schedule, monthly release & up to 1 billion performance based, with no lock up and 5 years vesting schedule after performance achievement, monthly release.

(Vacant) / Up to 50x starting open vacancies when we hit the soft cap in the pre-private sale

B2C Service Representative

1-Star Viisiiter (starting as 0-Star Viisiiter)

ViisiitCoin Team reward: up to 100 million non-performance: 2 year lock up after dICO/STO - after which, 30% release, then 10 year vesting schedule, monthly release & up to

500 million performance based, with no lock up and 5 years vesting schedule after performance achievement, monthly release.

5.1.3 ViisiitCoin© rewards to internal team members

In the end there could be a surplus of Viisiitcoins in this fund, either if not all non-performance based budgeted ViisiitCoins gets awarded to some or most, if not for everyone not hitting the predetermined performance target(s) set. Due to business sensitive information carried in the performances, they are not specifically mentioned in the whitepaper.

Also, a team member can choose for more free time, or to work other jobs on the side, which could make them miss their personal targets, but because of this fact Viisiit.® would need to hire someone to fill in for their tasks and the new team members will in turn get new performance goals. So, the surplus will be used to recruit more team members.

In the situation that everyone hits their performance targets, then the remaining ViisiitCoin will be taken from the 40 billion VC that is reserved for other team members acquisition and/or as extra recruitment incentive pool from the Salary Reward Fund.

When all soft caps are reached in the dICO/STO, we can welcome 1.000+ new Viisiiters in our team from all over the World (in between 0 to 5 years), and when all hard caps are reached, we can welcome more than 10.000+ new Viisiiters in our team, in between 0 to 5 years. We could grow to 100.000 to +1 million Viisiiters 10 to 20 years, all depending then on the revenue performance.

All numbers excluding the external/freelance team members. Each of these Viisiiters will be eligible in the future to earn ViisiitCoins for performances or achievements. Viisiiters at the start who help grow the company will have the opportunity to receive and/or be rewarded more ViisiitCoins than future Viisiiters, but future Viisiiters will need to be thankful then to those Viisiiters that they got that job.

5.2 External / non-payrol team members of the Tiendemanns Group

There are 50 billion ViisiitCoin in this fund reserved for external team members. These funds will be used to get expert advise and/or help for the internal team. These advice and help will mainly be concerning the ViisiitCoin blockchain, Viisiit.®, PreciousChips® and general marketing and business guidance and help through useful connections or specific or general business advice

Chris van Maarseveen (co-writer Whitepaper)

Komodo Liaison, Tokenomics & Coin Advisor & dICO/STO Investor Recruiter

ViisiitCoin Team reward: 100 million non-performance based, no lock up after dICO/STO & up to 1 billion performance based: 2 year lock up after dICO/STO - after which, 30% release, then 10 year vesting schedule, monthly release & min. 100 million up to 5.1 billion performance based, with no lock up and 5 years vesting schedule after performance achievement, monthly release.

Jeroen van der Heide - Impakt Tribe

Equity Investor Relations and Business Advisor

ViisiitCoin Team reward: up to 50 million non-performance based, 2 year lock up after dICO/STO - after which 30% release, then 10 year vesting, monthly release.

Bio of Jeroen:

Jeroen born on 20-06-1978 in Den Helder is an energetic, creative mind that combines head and heart in the right dose. As a Student he already thought outside of the box and he always sought a path that was innovative and different, as an Int. Sales manager in the wholesale of clothing this became his specialty. He ensured that K Karl Lagerfeld got a stable base in three years in the Netherlands and Scandinavië, then worked for DKNY, and he ensured that Hans Ubbink was expanded internationally: Belgium, Russia, France and Germany. With this experience he can call himself an expert in the wholesale of clothing: a driven strategic leader who is always looking for new ways to innovate. These years of Int. sales expertise he takes with him into his new innovative online fashion company TSHARED, TSHARED is an online fashion company which stands for Zero Waste fashion. Next to his own company he is business partner @ INVESTOR ready where the mission is to help companies build the perfect Investor deck and get funding for them. They have an network of 500 active Tech Investors.

Jeroen's vision:

The clothing industry is still a closed fortress for consumers. Somewhat exaggerated: consumers have no idea what clothing companies earn on a product, how, where and by whom their products are made and under which circumstances products are produced. By keeping the cards against the chest and only gradually sharing knowledge, the clothing industry tries to maintain its position. But the world has changed, customers have a clear voice through social media channels, there is 30% overproduction in the clothing industry of products that the customer does not even want to buy, people's rights and the environment are ignored. TSHARED will tackle these problems by being open, showing people behind TSHARED, sharing knowledge, positioning themselves clearly and showing her added value.

Jeroen's mission:

Making the clothing industry more transparent, putting the customer first, contributing to a healthier environment and improving the working conditions of 1 million workers in the clothing industry.

"I see it as my mission to make the clothing industry more transparent for the consumer, so that he / she can make a solid decision in buying his / her clothes. By empowering the customer by making them part of the design process, it is possible to stop 30% overproduction. In addition, I think it is normal for companies to contribute to both the environment and the rights of the people who work in the clothing industry. I believe that companies can become the new healthcare institutions. This mission and the way I want to shape it is the result of my development since the moment I graduated as a Bachelor of Commerce in Leeuwarden."

Other External Team members

The rest of the +25 billion ViisiitCoin is destined to reward the rest of freelance Viisiiters we need to hire and/or to be used for incentive for new (external) team members and advisers to fill positions we need to most help with. There is also room, if needed, to use ViisiitCoins from the Salary Fund to recruit more external team members.

Freelancers or people that do a one time job for Viisiit.® and/or Tiiendemanns Group may be rewarded with ViisiitCoins from the External Team Members fund with reward amounts beneath 1 million ViisiitCoin can be anonymous awarded with only mentioning the reason for release and country of origin of recipient.

Until now only 250.000 VC has been awarded to Laurens Sernets for his contribution to the initial designing process of the whitepaper.

6. Komodo protocol

ViisiitCoin will be build on the Komodo (KMD) platform. This means ViisiitCoin will be a Komodo sidechain. This results in multiple advantages. 1) Komodo sidechains are extremely secure, 2) Komodo sidechains are extremely scalable, 3) Komodo sidechains are extremely independent.

These will be elaborated on consecutively;

6.1 Security

Komodo side chains use the delayed proof of work (DPoW) consensus mechanism. This means that every hash of all Viisiitcoins blocks will be stored within transactions on the Komodo blockchain. Concretely this makes it that you need to attack the Komodo blockchain, to be able to attack the ViisiitCoin blockchain. Komodo does the same thing with the Bitcoin chain, meaning that you need to attack Bitcoin in order to be able to attack Komodo.

This works by a notary node mechanism. These are special nodes in the Komodo network that write the hashes of blocks into different blockchains. They do this by making a transaction on that blockchain and adding a text message, which is the hash. This means that if a hash is different than the hash in the other blockchain we know that version of the blockchain is wrong.

Because of the DPoW that ViisiitCoin uses to secure itself in Komodo, and Komodo uses to secure itself in bitcoin, the hash rate of ViisiitCoin is virtually all these hashrates added up, making it one of the most secure chains on the planet.

6.2 Scalability

Komodo assetchains can use advanced Federated chain syncing technology. This enables them to combine chains and make it act as virtually 1. Metaphorically it is like adding lanes to a highway, and concretely it means that Komodo has done over 20k transactions per second.

It technically works like this, however I warn you it is complicated:

Komodo's scaling solution follows a procedure similar to the dPoW notarization process. To put it simply, Komodo's scaling solution works by creating many blockchains that can each process transactions simultaneously, while also syncing with one another to achieve interoperability. We call this new technology Federated Multi-Chain Syncing.

There are currently a total of 1,024 chains that exist for the purposes of testing Komodo's scalability solution. Each of these chains is independent and can process transactions without being slowed down by the activity on any other chain on Komodo. We call these independent chains "assetchains."

It's worth emphasizing the fact that there is no limit to the number of assetchains that can exist on Komodo Platform. Assetchains are created for the purposes of Komodo' scaling solution, but they can also be created for independent projects.

All of the assetchains uses the Federated Multi-Chain Syncing tech communicate with the Komodo chain. This interoperability can also be extended beyond the scaling solution tech. The federated chains can also communicate, via the Komodo chain, with every

other chain that exists on Komodo Platform. This allows any chain on Komodo to verify transactions that took place on any other chain in the ecosystem.

Step One

The first step in Komodo's scaling solution is to create thousands of Merkle Trees out of all the transactions taking place on each and every chain on Komodo. Traditionally, each block in a blockchain has one (and only one) Merkle Root. That Merkle Root is the digest of all the transactions IDs for all of the transactions written onto that particular block. This is also true of each block in each of the assetchains on Komodo Platform.

New blocks are mined roughly every 60 seconds for each assetchain. This means one new block, with one unique Merkle Root, is produced every minute or so, for each chain.

Then, every ten minutes, Komodo's notary nodes create a new Merkle Tree out of all the Merkle Roots that have been generated since the previous notarization. This happens for each assetchain in the Komodo ecosystem utilising the Federated Multi-Chain Syncing feature.

Since blocks are mined roughly every 60 seconds and the notarization process occurs roughly every ten minutes, there are between 8 and 12 Merkle Roots that get organized into a new Merkle Tree. Each new Merkle Tree fingerprints these 8 to 12 Merkle Roots into a new Merkle Root. We might call these new digests the "Merkle Root of Merkle Roots" or the MoM for short

Step Two

Next, Komodo's notary nodes take the MoM from each assetchain and sync them all with the Komodo chain. This is similar to the DPoW process except, rather than notarizing a snapshot of the KMD ecosystem to the Bitcoin chain, the notary nodes are notarizing a single digest— the Merkle Root of Merkle Roots, or MoM— from every federated assetchain onto the main KMD chain.

Step Three

Once all the MoM have been synced with the KMD chain, they are organized into yet another Merkle Tree. So all 1,024 digests are fingerprinted into one new Merkle Root— the Merkle Root of the Merkle Roots of Merkle Roots (MoMoM).

This single code is the fingerprint of every single transaction that has taken place on Komodo Platform since the previous MoMoM notarization occurred. That's true, because every transaction on each block is hashed into a Merkle Root. All of the Merkle Roots for all the new blocks are hashed into a MoM. This happens for each chain in the Komodo ecosystem. Then those MoM are sent to the KMD chain, put into a new Merkle Tree, and hashed to form the MoMoM.

Step Four

The fourth and final step in Komodo's scaling solution process is to notarize the MoMoM back onto every assetchain in the ecosystem. Komodo's notary nodes perform this operation, too.

This last step is crucial because it allows interoperability between all chains within the Komodo ecosystem. That is, transactions that occur on one blockchain can be quickly and efficiently verified on a completely separate blockchain. This increases the speed at which the ecosystem can process payments and transactions.

It bears repeating that all four steps of Komodo's scaling solution are repeated approximately every ten minutes. This is an ongoing process that continually puts all of the chains in Komodo's ecosystem in sync with each other.

[edited from: <https://komodoplatfrom.com/komodo-platforms-new-scalability-tech/>]

6.3 Freedom

All sidechains on Komodo Platform, make use of the Komodo ecosystem, but are independent of it. This concretely means that whenever a better option is discovered ViisiitCoin can change platform at any time, with minimal effort. This gives ViisiitCoin an incredible edge over all other projects since they are locked in one platform.

These are the main advantages of operating on the Komodo Platform, and this is the main reason why we have chosen to use this platform.

7. Terms & stipulations of the pre-private sale

Please be advised that no token will be physically nor electronically exchanged during this pre-private sale, because with funding obtained from the pre-private sale we can hire developers to create the blockchain on the Komodo platform. Blockchain developers are expensive, good blockchain developers that care about security are more expensive.

Another expensive expertise are legal people that know about STO's, taxation laws for crypto's and experts that can create good prospectus. To do the public dICO/STO we need a (stronger) prospectus for sure, so that we can let retail international investors participate in the dICO/STO too. The funding we obtain in this pre-private sale will help us get there. This whitepaper is written to follow Dutch and EU laws.

The pre-private sale is available only for institutional or accredited buyers, with a minimum of € 125.000, \$ 150.000, 40 BTC or 857 ETH per person/entity, or to be bought in other selected fiat or cryptocurrencies. One must also be able to prove that they have a (yearly) income that can sustain the purchase of such amount of a (future) cryptocurrency.

If hard cap of 15 billion VC is not reached, then leftover ViisiitCoins can be bought again in the private sale. All ViisiitCoins bought in the pre-private sale are locked for 5 years after the end of the dICO, in which after that 20% will be send to the wallets of the buyers, and the rest will have a 10 year vesting schedule, with monthly releases.

Everyone participating in the pre-private sale needs to go through a KYC/AML process. That will also be the case if you'd like to get more in-depth information about Viisiit.® and/or the Tiiendemanns Group. For other more general information, see the website of Viisiit.® for more information; www.ViisiitCoin.com (website under construction; with funding from the pre-private sale we can pay designers to build better websites, UX-wise).

Starting thus with only accredited buyers that can buy at least € 125.000, \$ 150.000, 40 BTC, 587 ETH, 600.000 XRP or 280.000 KMD worth of ViisiitCoins in this round. The discounted prices will be fixed during each period and varying each period, with the most

discount being given in the first period, with a 98,5% discount given on the nominal ViisiitCoin price of € 0,05, \$ 0,06 or 24 satoshis.

To limit the chances of a large portion of ViisiitCoin to get in the hands of whales that only want to speculate and turn a fast profit with the coin and that don't care about if we grow the projects, or not, there's a hard cap for each participants of € 1 million, \$ 1.2 million or 320 BTC set for 1.3 billion VC in this pre-private sale. There's also a lock up period and a vesting period set in place, to evenly release the coins during, for the regular crypto community, a lifetime, which in reality it's just waiting 5 years to receive a 10 year long, monthly faucet release to your wallet. Only children won't understand why the saying goes "time flies", creating long term value needs effort and time.

It is our opinion that this short term thinking and short term speculative hunting prevalent in crypto communities is destroying the name of blockchain and good cryptoprojects, which is hindering its entrance into the mainstream. The Tiiendemanns Group is made to stay and become a cross generational organization. Creating great or amazing lasting value, either financially or for societies does not get created overnight, and we are working to do both.

If you're interested in starting the KYC/AML process, but have some questions that you feel are not answered in this whitepaper, then you can always contact the team to set up a (video/phone/in-person) meeting to discuss the questions you might have. But that option, in the pre-private sale, is only reserved for people that are interested in participating in the pre-private sale and have the minimum amount of money to give and can part ways with it for at least 5 years, and get the coins you paid for, spread out over a period of 10 years afterwards.

This is the same 5 year lock up period that the Founder of the Tiiendemanns Group starts with, with only exception that he receives the 10 billion non-performance based VC during a vesting period of 30 years. The performance based VC during a vesting period of 5 years after performance achievement. Let there be no misconception of this fact.

7.1 Extra information about the pre-private sale

Of the total of 1 trillion ViisiitCoins mined, a total of 200 billion ViisiitCoin is available to be sold in the whole dICO/STO, including the pre-private sale and the private sale with 25 billion ViisiitCoin allocated for the 2 rounds combined. The pre-private sale ViisiitCoins available is capped at 15 billion, making the cap in the private sale at a minimum of 10 billion ViisiitCoin.

The 1st period price in the pre-private sale will start at € 0,00075, \$ 0,0009, or 24 satoshis per ViisiitCoin. With the 1 first accredited investor buying at least the minimum of € 125k, \$ 150k or 40 BTC, etc., getting 100% extra ViisiitCoin. The second accredited investor buying at least the minimum receives 50% extra ViisiitCoin, and the third accredited investor buying at the minimum receives 25% extra ViisiitCoin.

In the private sale only the first 2 accredited investors will receive a bonus. All unsold ViisiitCoins after the private sale will go to the public dICO/STO. ViisiitCoins bought in the pre-private sale are linked to a longer lock up period and a longer vesting schedule after the end of the dICO/STO than ViisiitCoins bought in the private sale, but can be bought for much more cheaper.

A total of 6.6 billion VC have already been sold in exchange for common share certificates in the mother company of Hiinderloopn Ventures, with a starting value of € 5 million, to 5 different entities/people within the Tiiendemanns Group. This makes it that a total of about 8.4 billion VC is left to be bought of the starting total of 15 billion VC destined for the pre-private sale. These ViisiitCoins, sold by Hiinderloopn Ventures B.V., weren't exchanged for fiat nor cryptocurrency, but for common share certificates in the mother company of Hiinderloopn Ventures.

The pre-private sale started in week 50, with only a plain text whitepaper version and lasts until July 31st 2019. The first period lasts till the middle of May, 2019 (VC price = € 0,00075 or \$ 0,00090), the second period ends at the end of May (VC price = € 0,00080 or \$ 0,00096), the third at the middle of June (VC price = € 0,00085 or \$ 0,00102), the fourth period lasts until the end of June (VC price = € 0,00090 or \$ 0,00108), the fifth period will end at the middle of July, with a ViisiitCoin price at € 0,0010 or \$ 0,0012, and the last period will end at the end of July, with a ViisiitCoin price at € 0,0015 or \$ 0,0018.

7.2 Reason to participate in the (pre-)private sale and later the public dICO/STO

You buy ViisiitCoins in the dICO/STO because you want to use the services of Viisiit.® and get a great discount on the price on the services that Viisiit.® will roll out in phases on the Viisiit.® platform. The services that Viisiit.® will introduce on the platform will be done by Viisiit.® or third-party partners of Viisiit.®. With services from Viisiit.® being for example that you can pay a Viisiiter to come help you move a large furniture, or come give you cooking lessons of their native dishes. In the future it will be possible for private Welcomers to offer their services and/or products on the Viisiit.® platform.

Viisiit.® will start with the door-to-door promotion, marketing and sales service, which will become a channel where advertisers/publishers, even from small and medium size organizations, get the opportunity to reach and engage (through an intermediary; Viisiit.®) with willing participants (Welcomers) during in real life product presentations. The advisers/publishers choose how much ViisiitCoins they want to give as reward for participating in the product presentation, so in the end you can also receive ViisiitCoin as rewards for participating in product presentations, surveys or product testing rounds.

With Viisiit.® we will be creating jobs, start with stimulating local economies, funnel money from corporations to end consumers and stimulate personal communication in an era where digitalization creates solitude bubbles in societies. In the end, you need to decide to participate in the pre-private sale because you want to help us with the initial funding to make this all happen, not because you are after a good pump and dump coin.

The ViisiitToken fork can be seen as a longevity and loyalty bonus token of which lucky ViisiitCoin holders at that moment in time can receive and others in the future can go buy. It will be also possible to even use ViisiitCoins itself after the fork, to become direct shareholders in Tiiendemanns Holding B.V. by buying (more) ViisiitTokens on the security exchanges and exchanging them for common share certificates of Tiiendemanns Holding B.V..

7.3 The relationship between ViisiitCoin© and the Common Shares in Tiiendemanns Holding B.V.

Tiiendemanns Holding B.V. will start with the statutory creation of 1 billion (1.000.000.000) common shares that are linked to the security token called ViisiitToken. These shares will be held in custody of the Tiiendemanns Group Trust. These common shares will start with a nominal value of € 10 million and between creation of the ViisiitToken-blockchain and 30 years after that we estimate the value of those common shares having at least a nominal value of € 50 billion when at least Viisiit.® and PreciousChips® have taken significant market share in their respective industries on a global scale.

The amount Hiinderloopn Ventures needs to raise to deposit the value of all underlying statutory created Team Common Shares and Class A Shares is € 214 million, this is including the ViisiitToken-linked shared. The vast majority of these Team shares are in long lock up periods and/or released through long vesting schedules. This last amount is the minimum we need to raise from the whole DICO/DSTO (ending in 2021, with possible 2 years extension). This is excluding the extra amount we need to globalize the services of Viisiit.® and to bring the other products and services to the global market.

The Tiiendemanns Group Trust is also the entity that will later facilitate the exchange of the ViisiitTokens for common share certificates in Tiiendemanns Holding B.V.. Exchanging ViisiitTokens for common share certificates makes all ViisiitToken holders future shareholders in Tiiendemanns Holding B.V.. Sharecertificates holders give their voting rights to the Tiiendemanns Group Trust, chaired by Alvin, but keep 100% of the economic rights of the underlying common share.

Each ViisiitToken represents 1/1000th of a common share, making the maximum total ViisiitTokens to be created 1 trillion (1.000.000.000.000). For this the same amount of ViisiitCoins will be created, all pre-mined and divided in different pre-determined funds with different lock up and vesting periods. ViisiitCoins are a pure 100% utility token, that are used for example to buy products, services or experiences across national borders on the Viisiit.® platform. Because of its utility, there is no other right to be had by holding ViisiitCoins.

These ViisiitTokens will be created by getting a snapshot of the ViisiitCoin blockchain 20 years after the dICO/STO of the ViisiitCoin. Every ViisiitCoin holder will receive the same amount of ViisiitTokens they are holding when the snapshots gets taken and the fork happens and the ViisiitToken blockchain gets created. To make those ViisiitTokens there will also be 1 trillion ViisiitCoins created, all pre-mined, divided in different locked and vested funds.

7.3.1 Statutory share structure of the Tiiendemanns Group

- 10.000.000 common stock to be bought by Alvin, at € 0,01 per stock. These stocks Alvin can only buy when he finds an angel-investor that can lend him the € 100.000 needed to buy these shares. Reality is that presently on the banks and the governments you cannot rely to start an ambitious company, only the public sector, private investors are the ones driving true innovation currently in the world (= Alvin needed to vent this out).
- At least 10.000.000 common stock is set aside to be bought by a (business) angel investor, that gets a Board of Directors seat and whom could even hold the vice-chairperson-ship of the Tiiendemanns Group.
- At least 30.000.000 common stock to be used as incentive for team member acquisition.

- Minimum of 300.000.000 common stock is set aside for (institutional) large investors, that are also the investors that are able to buy the Class A stock. (5 million available in this Alpha seed phase for investors, the rest are divided between management team/Boards, with performance based and non-performance based reward structure).
- 200 to 150 million; reserved to be bought by smaller (accredited) investors or family and friends of team members (with +650k already sold), or available if the accredited/institutional investors wants to increase their initial stake in the company, or available to exchange for (partial) ownership in strategically interesting companies/teams.
- 50.000.000 common stock is set aside for the salary in stock reward program, granting team members 5 to 100% extra common stock on their gross salary at the end of one work year, when they decide to take 10% to 100% of their salary in common stock instead of fiat money, (and/or they can decide to mix their salary pay-out between common stock, ViisiitCoin and/or fiat).
- 100.000.000 common stock is sold to Hiinderloopn Ventures B.V. for 1.333.333.333 ViisiitCoin in the pre-private sale, without reward option.

7.4 Personal note from the Founder of the Tiiendemanns Group: Alvin Leito

As a personal note, which for full disclosure; Chris advised me against doing this because a lot of scam(my) projects also did personal notes. Even if that is the case, the reason I chose to make a personal note still, is because with me on the internet I'm not hiding as a person, as many of those scam(my) projects do. They talk personal to you, but try to find the person saying those words to you. With me, even though since 2012 I haven't been active on the popular social media platforms, since 16/17 I did start being active for T.C.P.A. Consultancy on twitter @TCPAconsultancy, with in 2019 became my personal twitter profile @AlvinLeito. Also, LinkedIn.com/in/TCPAconsultancy (not active anymore), because started in 2018 with a personal linkedin account on www.linkedin.com/in/AlvinLeito. The twitter account for the Tiiendemanns Group on twitter @Hiinderloopn, at the time of publishing is also managed by me.

There's also a not so active Reddit and Steemit account of T.C.P.A. Consultancy and other than those channels, I've made through Weebly (not a sponsor, yet, at least) a few websites all linked on the T.C.P.A. Consultancy website; www.tcpaconsultancy.com;

- Wwww.tcpa5pmanagementconsultancy.com; to find more info about the 5P-Management Principles and Philosophy-Formula©
- Wwww.tcpaguidancecenter.com; to find more info about the Peace and Prosperity-Equation©
- Wwww.AlvinLeito.com; to find more info about myself
- Wwww.Tiiendemans.com; to find more info about Tiiendemans Intellectualis Proprietas B.V.: the legal owner of the trade secrets and trademarks described and inspired from the 1001 Year Plan
- Wwww.Tiiendemanns.com; to find more information about Tiiendemanns Group in general

As you will see on those websites, they are not finished. As in, with the complete information on them and/or design is not UX optimized for best readability, because I did that myself and with help from investors and participants in the dICO/STO our team will get the funding to work on those. The websites are now build to inform not to teach, that's why the information on there is not yet finished. So if you think that they look like an amateur made them, I couldn't blame you in thinking that, because copywriting and

graphic designing is not my strong suit. Business development, managing teams, problem solving and creative thinking, are. Societal betterment, as in, leave the World in a better state than when I was born is my passion in life.

Before you even consider in helping this team out by participating in the private rounds or the dICO/STO, you need to understand and accept how this business is structured. Because at the start it will be fully centralized and managed by myself. But, with a lot of the bonus allocations and future share creation schemes statutory set and legally binding by Dutch and EU law from the start. With afterwards high quorum and voting requirements needed to change fundamental statutory rules and regulations, like share count amount, lock up and vesting periods, bonus allocations and corporate goals and mission statements.

Therefor as the Founder, I will start with absolute voting power through the Tiiendemanns Group Trust, all the while starting as a small economic shareholder and I will need to earn, through the passing of time or through predetermined performance achievements the rest of the common shares and Class A shares to become a major economic shareholder. As more shares gets created and when the vast majority gets distributed between the equity (accredited/institutional) investors, all 3 branches of the management layers of all entities in the Tiiendemanns Group, all team members that reach predetermined performance achievements or when the company as a whole reach predetermined performance goals and participants in the dICO/STO, that absolute power gets diminished until reaching an influential level and becomes not absolute anymore as time passes and the organization gets more decentralized run.

Understanding this introduction, means that you understand our ambitious goals and the patience and endurance we have to get there, all the while rewarding both the equity investors that start with us from the beginning and the investors that start with us even after reaching the milestone of the 1001 anniversary of the Tiiendemanns Group. With only difference is, we don't need to talk about the dividends that they will receive, because by the time this becomes a reality, that will be something to become jealous about. Investors in the beginning will need to satisfy themselves with share value creation through the stable and steady growth of the Tiiendemanns Group as a whole. Especially in the first phases of growth of the Tiiendemanns Group exit for investors will mean selling the shares to other (private/institutional) investors or through share buy back programs from the company.

It is to be seen if the Tiiendemanns Group will give out dividends in my life time. A special dividend when one of the subsidiaries of Tiiendemanns Holding goes public, could be a possibility, depending the reasoning we as shareholders decide to take that subsidiary public. I am of opinion that the current state of global stock market systems are driven only by numbers, not real life outcome/output nor societal contributions/gains.

This creates business cultures of short term financial risk taking management styles, for higher short term gain (only financially) and lower long term gains (both financially and societal), instead of business cultures with long term financial stability management styles, for lower short term gain (only financially) and higher and more sustainable long term gains (both financially and societal).

So please be advised, that as long as I hold that absolute voting power and/or an influential enough voting power, I will not vote to take Tiiendemanns Holding nor Hiinderloopn Ventures public, especially not as long as the status quo is maintained. The

statutory share structure is designed to withstand the period being private with the growth prospect of being active in all countries around the World. All the statutory lock up and vesting periods reflect this mission to connect with anyone on Earth willing and able to welcome us into their lives.

Alvin

Tiiendemanns
Holding B.V.

HiiNDERLOOPN
Ventures B.V.

8. Disclaimer about this

All what is written in this whitepaper conforms to the 5P-Management Principles and Philosophy-formula©. Even though the ideas contained in this whitepaper may sound very difficult to achieve, nothing described in here is undoable or impossible to achieve. Difficult? Yes. Too difficult? Only with little funding.
